SyllaSense Decodable Readers

Are you looking to build a library of Decodable Readers in your school or home? SyllaSense Decodable Readers provide opportunities for students to develop and practice grapheme–phoneme correspondence as well as an understanding of orthographic conventions, morphology, and high frequency words.

These books are ideal if you are searching for a more systematic approach to teaching the building blocks of reading, while still keeping meaningful text and natural language structures at the forefront. Created in Canada, these engaging, meaning-rich stories are a great addition to any school or home library!

Key Features

- Texts only include concepts that have been previously introduced and explicitly taught
- Blending can be used to read all words on the page, with the exception of a small selection of high-frequency words
- Books contain natural language structures and are meaning-driven
- Stories are engaging with interesting characters and plots
- Prefixes and suffixes are introduced in books, providing the opportunity to explore concepts of morphology
- Books follow a well-defined and extensive Scope and Sequence, which is broken into five categories:
 - Grapheme/Phoneme Correspondence
 - Orthographic Conventions
 - Morphology
 - Punctuation/Text Features
 - High-Frequency Words

Notes on our Scope and Sequence

The Scope and Sequence chart indicates which concepts are introduced in each book. It is essential to pre-teach the concepts introduced in each book prior to reading. For example, before reading “Cat Nap” a student should already have been introduced to <a>/ă/, <o>/ō/, and the consonants included in the book. Pre-teaching concepts is critical to successful reading. The following notes correspond to the subscripts on our Scope and Sequence.

1. We use the term “High-Frequency Words” to describe words included in our text that contain concepts not yet introduced in our scope and sequence. These words are often referred to as “irregular”. In most cases, the spelling and pronunciation of these words is not “irregular”, but rather less common, or influenced by the fact that English is a “stressed timed” language (function words such as “the” and “a” are usually unstressed and include a “schwa” /ə/ rather than a short or long vowel sound). Later in the series, we also include a few “content” words that contain concepts not yet covered, but are key to the storyline or topic. The word “and” is also included in our High-Frequency Word column, due to the consonant cluster <nd>. Using the word “and” in our early books allows for more natural language structures and longer sentences.
2. Throughout the Scope and Sequence, we use angle brackets (<>) to indicate the pronunciation of letter names, and slash brackets (/ /) to indicate the pronunciation of letter sounds (phonemes).
3. Use <c> as the default grapheme for /k/. Use <k> for /k/ when followed by <e>, <i>, and <y>.
4. In our first few books, we have several pages that only contain phrases. As such, they do not have capitalization or ending punctuation. Full sentences (containing a subject and a predicate), are capitalized and use ending punctuation. In our DECK-odables, we sometimes use capitalization and exclamation marks for sentence fragments meant to show a strong or forceful emotion (e.g., “A mad cat!”).
5. The “schwa” is a neutral, unstressed, non-distinct vowel sound. Many function words (such as *a*, *the*, and *was*) are pronounced with a schwa.
6. The concept that English graphemes often include more than one letter is an important concept to teach early in literacy instruction. Several consonant digraphs are introduced in the Yellow Series, including <th>/ TH/ voiced (exclusively in the word “the”). In the Green Series, additional digraphs are introduced, as well as additional words with <th> (both voiced and unvoiced).
7. Many resources use the term “consonant blends” rather than “consonant clusters”. We use the term “consonant clusters” to refer to separate graphemes (letters) side by side, each representing a separate phoneme (sound). As mentioned above, the only consonant cluster introduced in the Yellow Series is <nd>, exclusively in the word “and”. We introduce additional words with consonant clusters in the Green Series.
8. Liquid consonants (<l> and <r>) are consonant sounds with less obstructed air flow. There is not enough obstruction to cause friction, and as such, these sounds can be perceived as vowel-like. They can be hard to pronounce when speaking and reading, and hard to hear when doing sound analysis of a word. Some students need extra support with these consonants.
9. The words “such” and “much” do not follow regular spelling conventions (use digraph <-tch> for /ch/ at the end of a base after a single short vowel). Noting this upon introduction can help avoid confusion later when <-tch>/ch/ is introduced.
10. We introduce the suffix <-ing> as a unit before we introduce the weld <ng>. Students tend to pick up <-ing> fairly quickly, but it can take some time and practice for them to isolate the <ng> heard within <-ing> and combine it with different vowel sounds.
11. In polysyllabic words, there will always be a stressed syllable. The vowel sound in unstressed syllables is a schwa, which is an indistinct vowel sound. Students can often hear the schwa in the suffix <-ed>, which is pronounced /əd/, not /ëd/.
12. The Blue Series and the Teal Series are parallel series, of similar difficulty levels. They both start with open syllables, but then diverge. You can choose which series to begin with, depending on your scope and sequence.
13. When students come across a polysyllabic word, the first step should always be to find the base and remove any affixes. If there are still multiple syllables, students need to look at the vowels and be flexible with the sound they try. If one vowel sound doesn’t work, they need to try a different vowel sound. Students need to be reminded that unstressed syllables may be pronounced as a schwa, so a straight long or short vowel sound may not always work when solving a word. This is why we encourage flexibility.
14. Many resources call this a “silent <e>”, some call it a “final non-syllabic <e>”. We refer to it as a “marker <e>”. Marker <e> has many uses in English Orthography (e.g., indicates or “marks” a long vowel sound in the “vowel-consonant-<e>” words, softens a preceding <c>, etc.).
15. There are multiple ways to represent the long <u> phoneme. In this series, we use /ū/ (e.g., “rule” and “cool”) and /yū/ (e.g., “cute”).
16. If you have purchased the Teal and Red Series, you will see that some of the concepts from the Purple Series are now introduced in the Teal and Red. We have done this because educators have requested the introduction of more concepts at an earlier level in the series. The main focus of the Purple Series is now the introduction of a range of prefixes and suffixes. We are aware that the current Purple books do not reinforce all the concepts introduced in the Red and Teal Series - we will provide this consolidation practice when we write more Purple titles.
