Cut along dotted line

Copyright 2025 SyllaSense Inc.

Educators have requested supplementary, practice, or take-home resources for students who are currently reading SyllaSense books in their classrooms. These image-less, printable resources will allow students to have their own copies of SyllaSense books, with their own illustrations, which can be taken home for practice. The intent is for these printable resources to be used in classrooms that are currently using SyllaSense Decodables in literacy instruction.

SyllaSense hereby grants royalty-free permission to print, share, and/or reproduce this image-less book in digital or print formats provided that the following conditions are met:

1. All recipients of printed copies of this image-less work are eligible users - users that have access to the full, imaged, and purchased book of the respective title
2. No modifications may be made to any digital copies of this copyrighted work
3. This work may not be combined with any other work (in digital or print format)
4. All reproductions must consist of the complete work (with the exception of this instruction page in printed reproductions)
5. No fees, costs, or any form of remuneration may be charged or requested for any copies of this content (either digital or print copies), including the materials or time required to create such reproductions
6. Neither the name of the copyright holder, nor the names of its contributors may be used to endorse or promote any product or service without specific prior written permission
7. Any digital/online links sharing this content must credit SyllaSense as the originator of the content

INSTRUCTIONS:

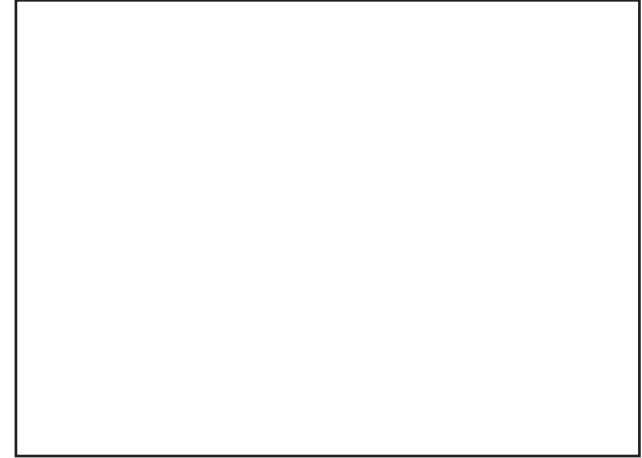

This document is designed to be printed double-sided on letter paper. Once printed, cut along the dotted line and discard the bottom half of the front page (these notices and instructions). Place the pages from the top half on top of the bottom half. Fold pages in half, then staple.

Life in the Arctic is hard, but these hares have adapted!

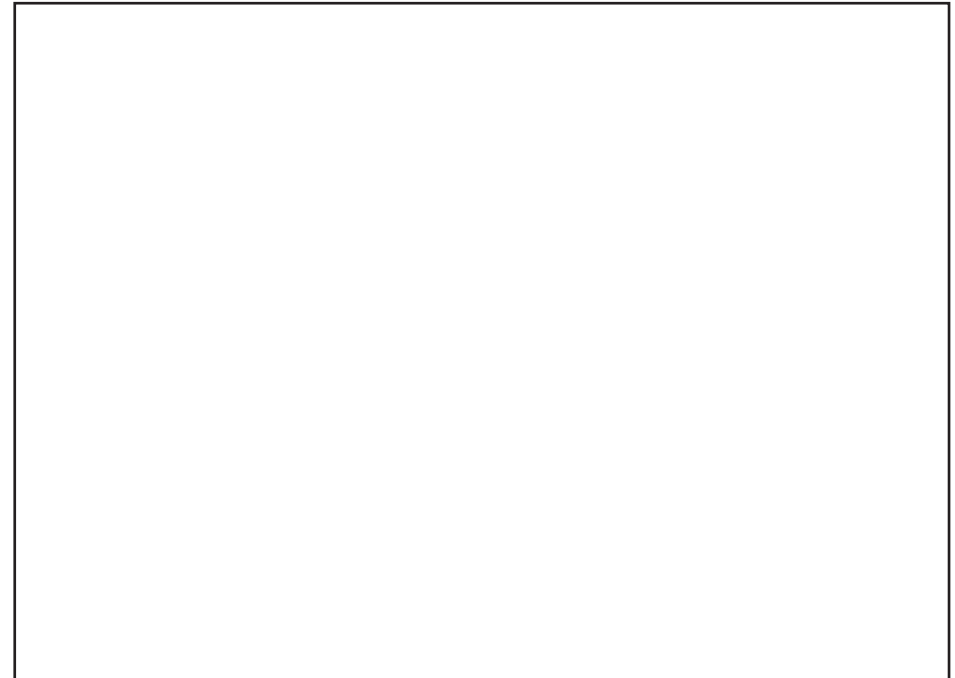

Arctic Hares

Written by Lee-Ann Lear

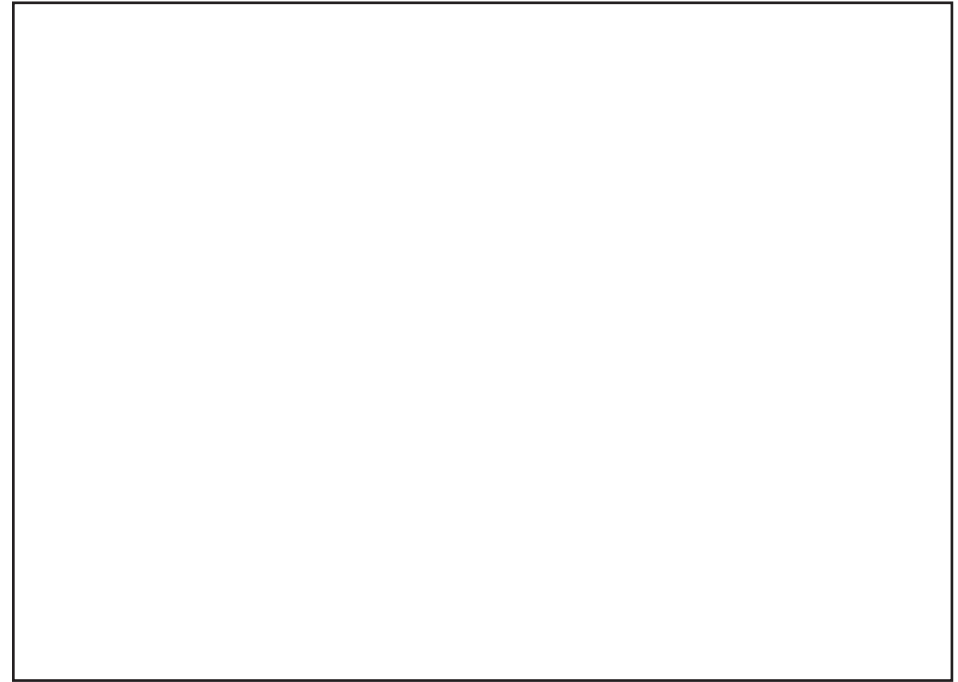

16

Baby hares are born in the spring when it's not so cold. A baby hare stays with its mom for a short time. Then, it takes care of itself.

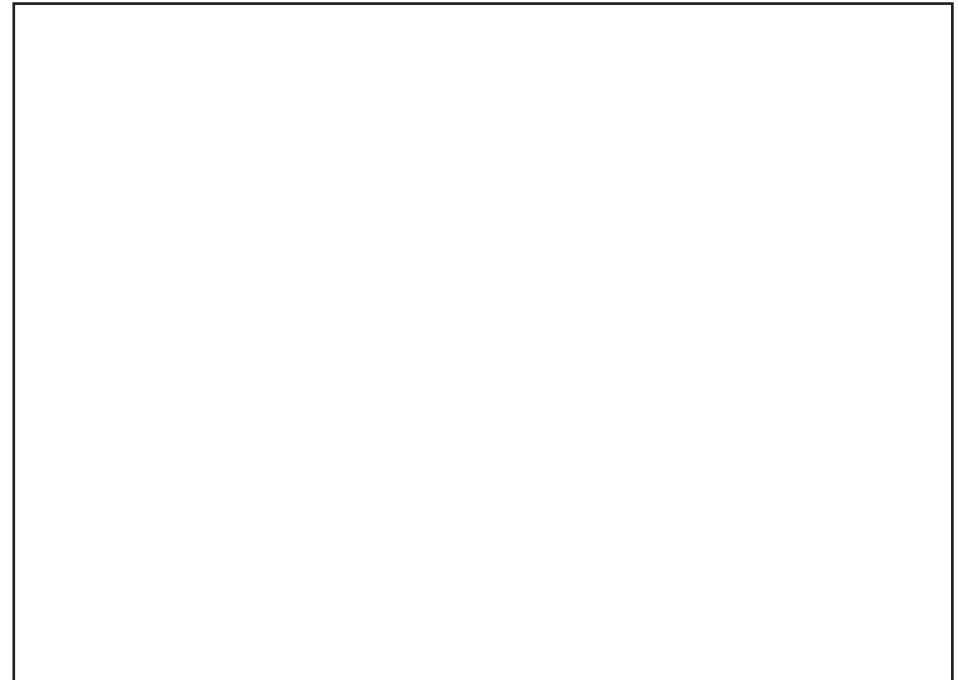

12

Arctic hares are native to northern Canada and Greenland.

2

An Arctic hare sheds its white coat in the summer so it can blend in with plants and grasses.

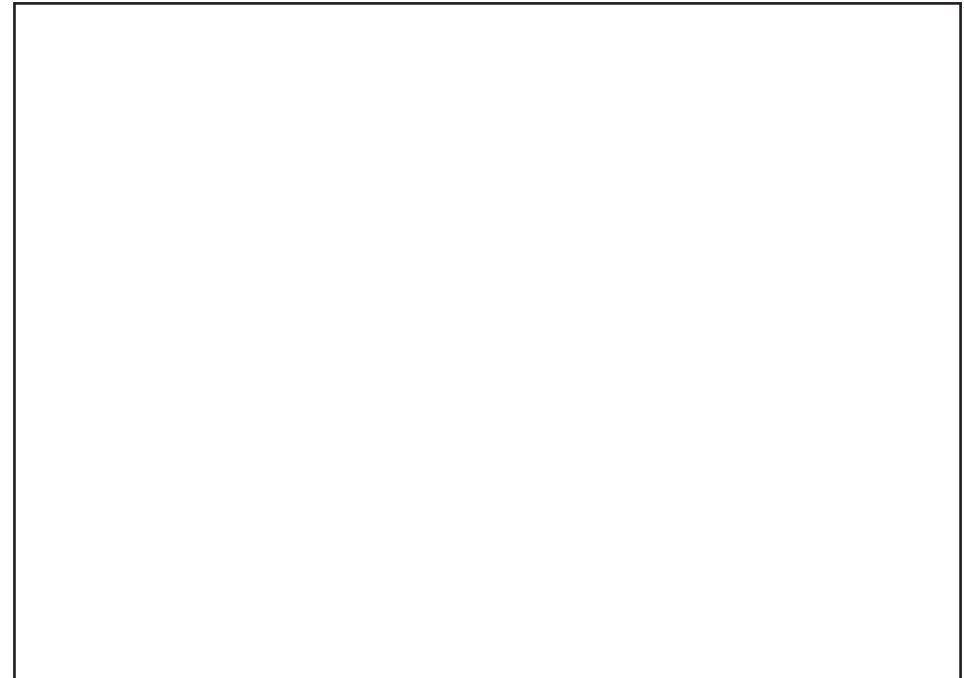

Arctic hares live off plants such as moss and grass. Plants are hard to find in winter, so hares will consume loads of plants in the summer to help them get by.

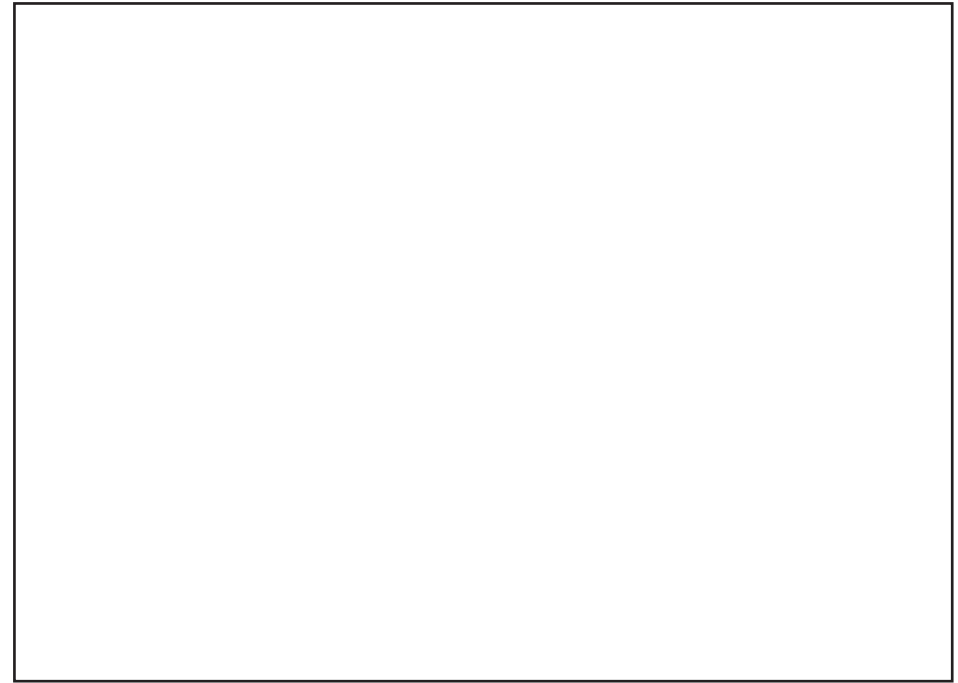

14

Arctic hares may need to roam a long way to find a place to feed. A hare can travel at a fast pace!

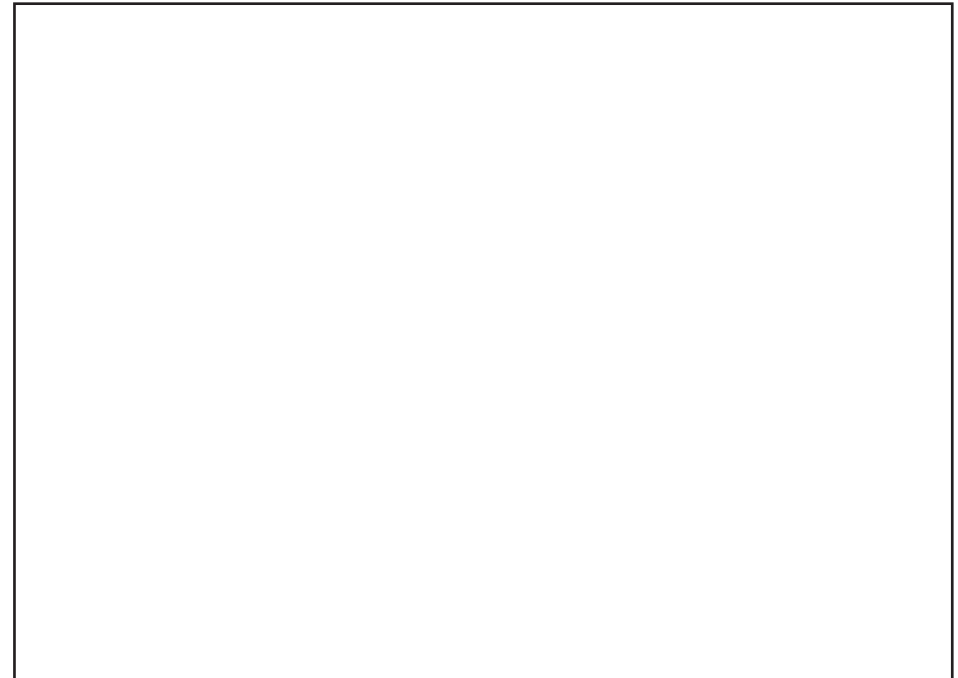

In the winter, an Arctic hare's coat turns white. This thick coat helps the hare hide from foxes and soaring falcons.

4

When it gets cold, Arctic hares may dig holes for shelter. These basic shelters stop the hares from getting soaked in ice storms and winter squalls. They also provide a safe place to sleep.

Do you like being up high?

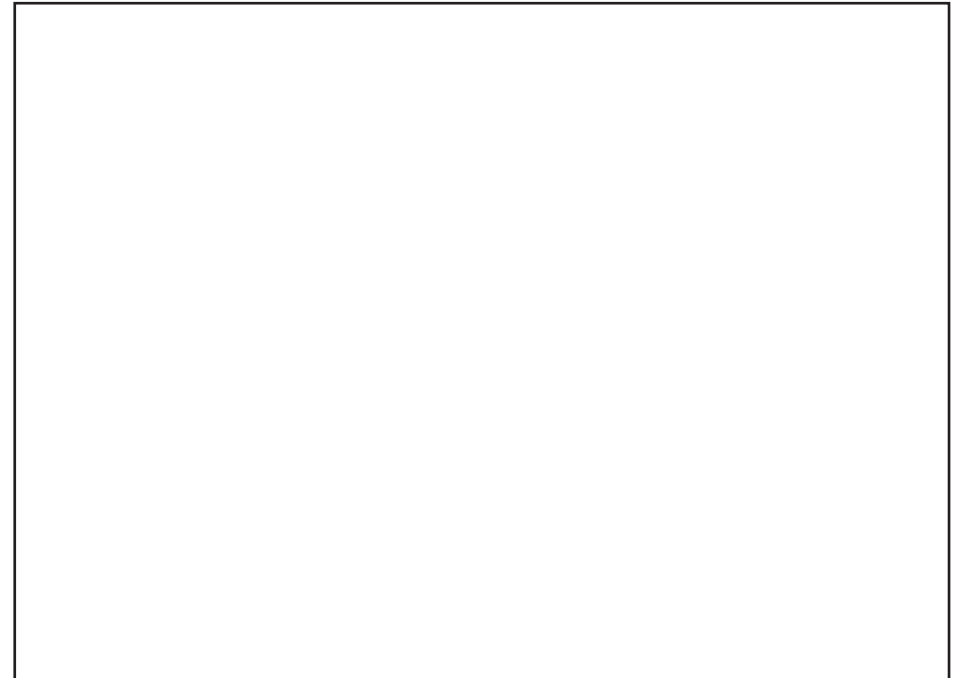

Up High

Written by Lee-Ann Lear

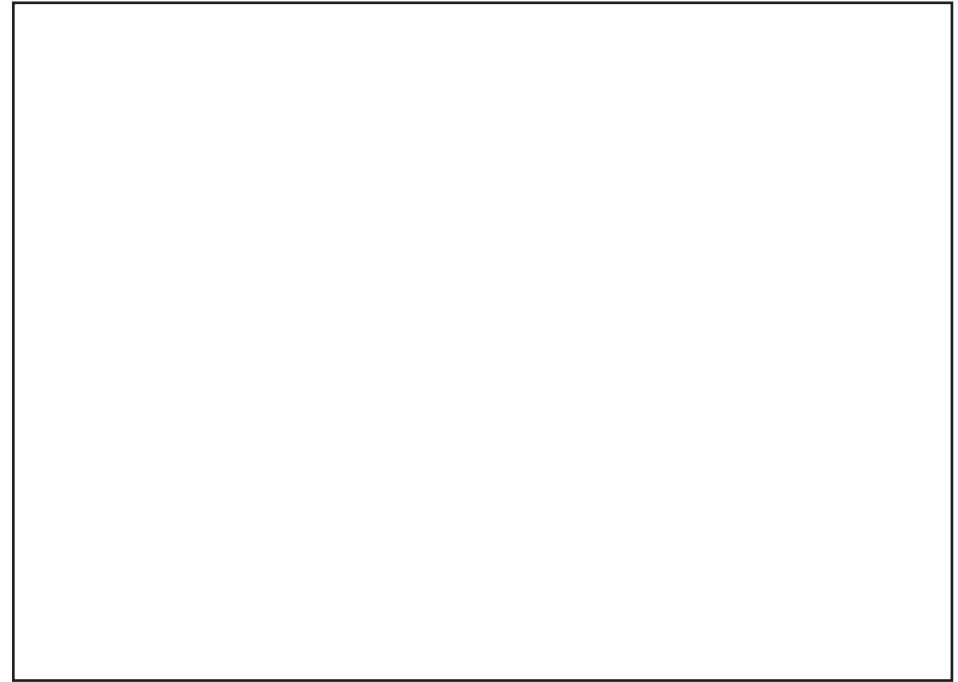

16

If you are brave, you can take
a lift up a slope. These chairs
hang from strong wires, and
take you right up to the top.
The sights will impress you!

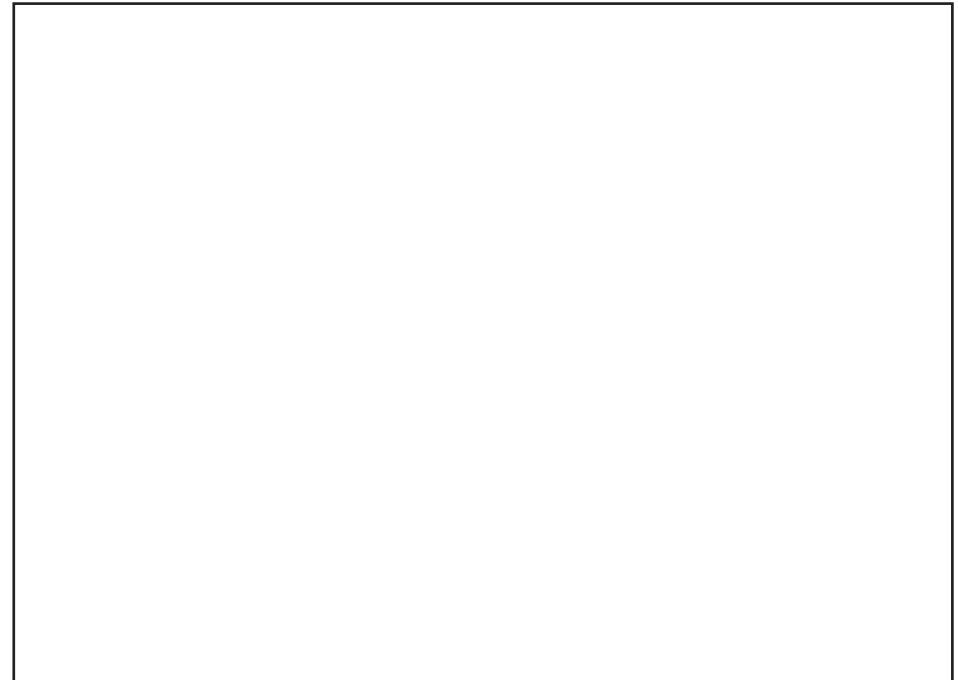

12

It can be thrilling to be
up high!

2

You might love going up, but a
rapid drop can give you a
fright! This ride spins as it
travels up. It holds you at the
top for a moment. Then, you
plummet to the bottom. Yikes!

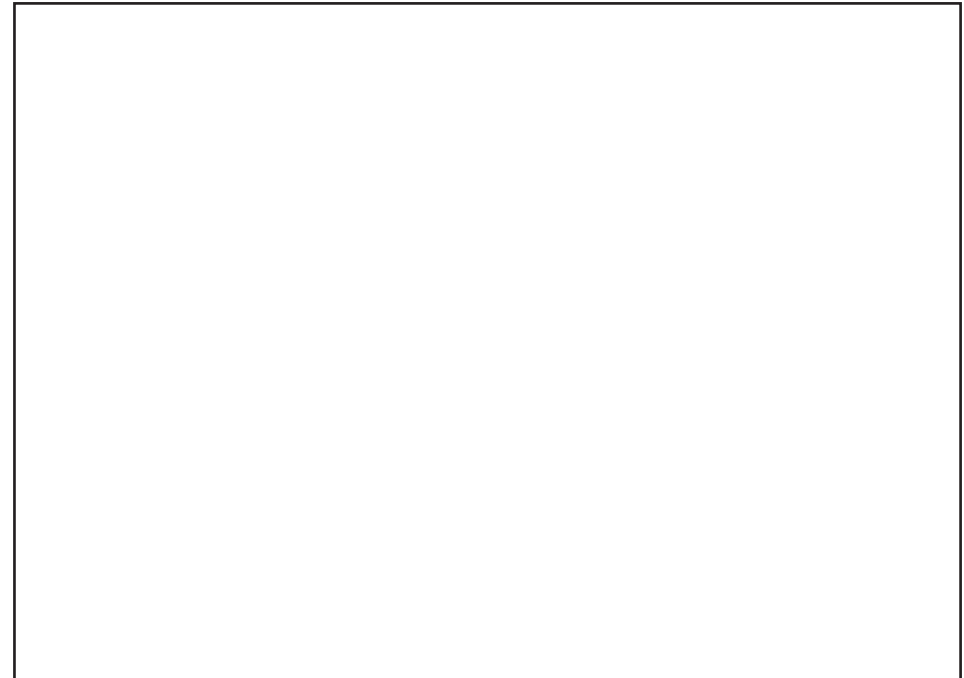

6

This zipline is high. Strap in tight! You can sightsee as you zip along at a fast pace.

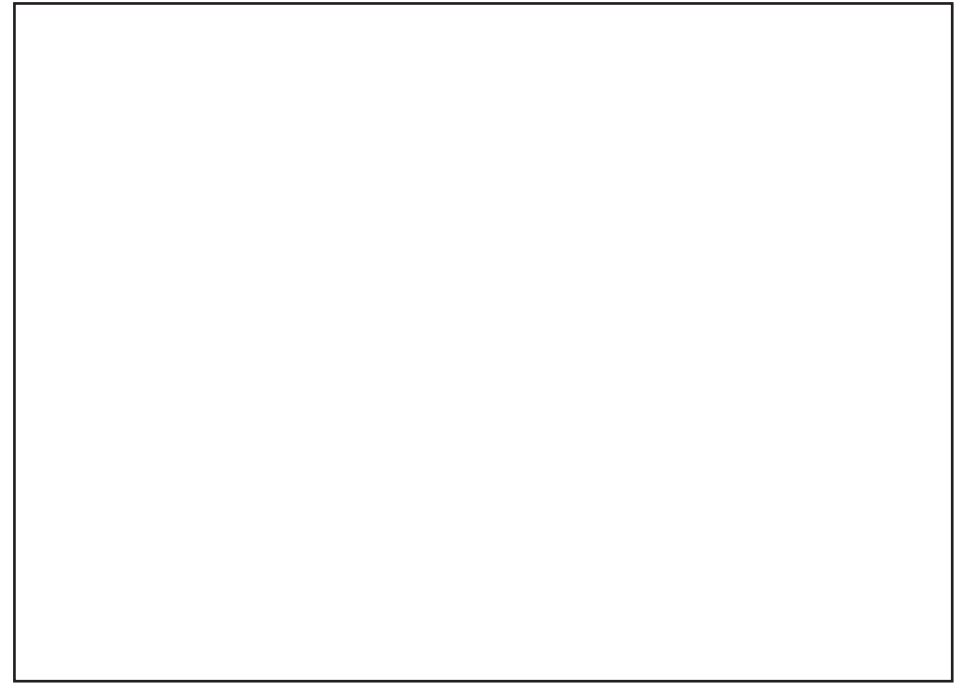

14

A bridge can also be a thrilling way to explore a high place. A bridge can span between the treetops. You might get a fright if the bridge sways in the wind!

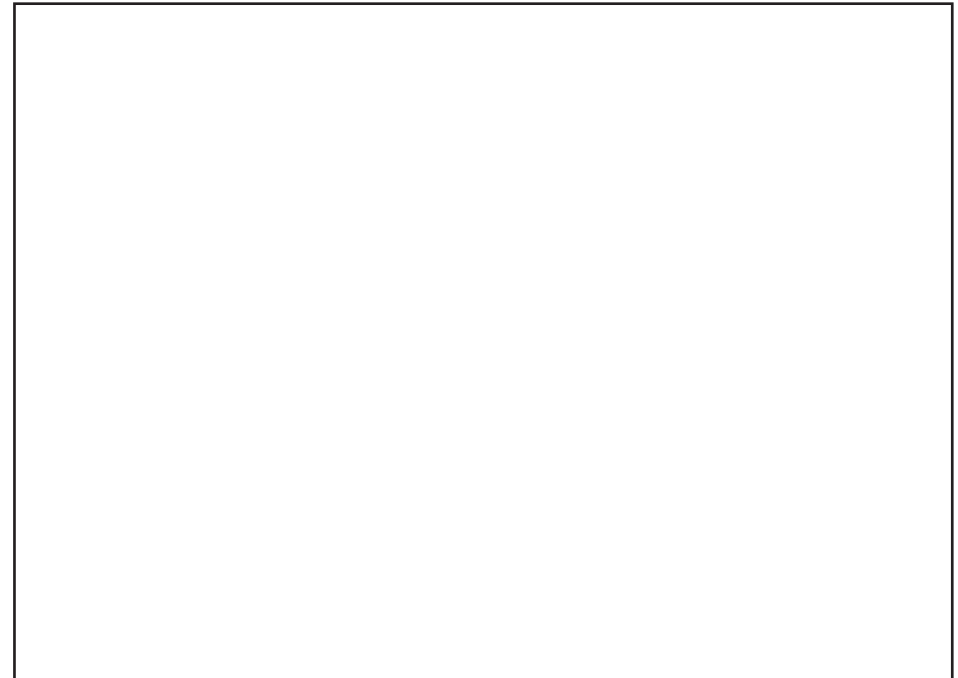

10

A jet will take you high in the sky. When flying at night, you can spot the major roads and city lights!

4

From the top of a high cliff, you might see birds in flight or a floating boat. Stay safe, and watch your step!

Made in Canada

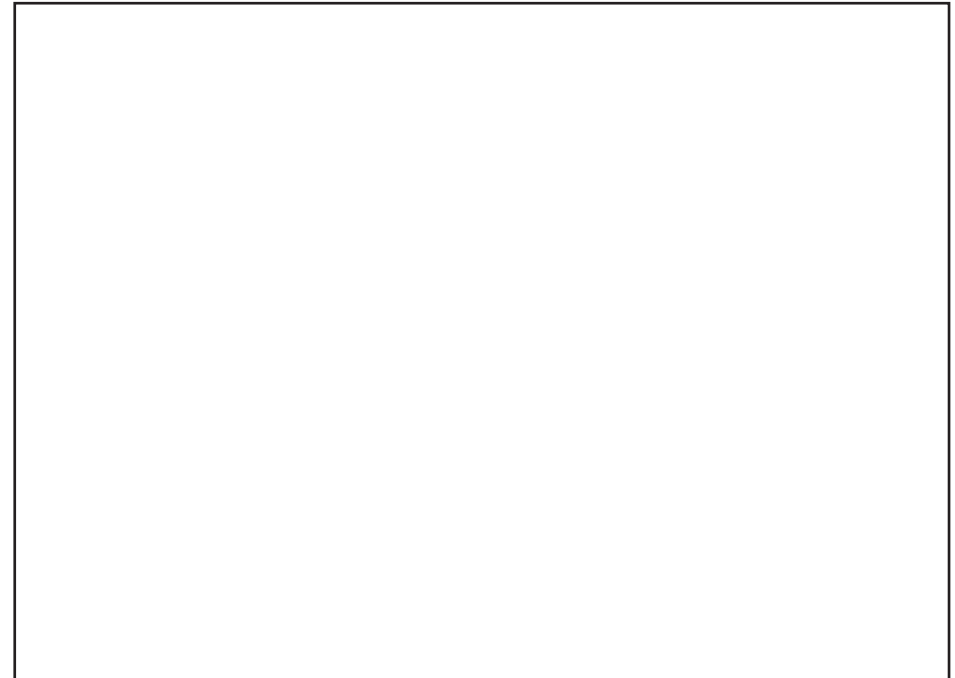

One day, you may find
a chunk of this glass!

Sea Glass

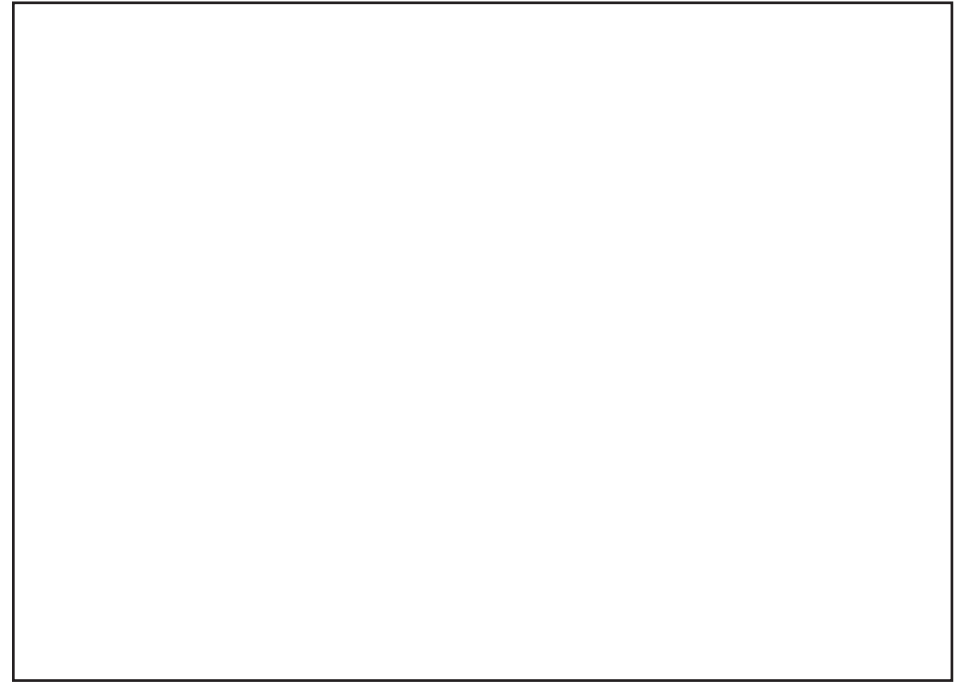

Written by Lee-Ann Lear

If you do find sea glass, you
can use it in many ways. Wind
chimes, mobiles, and pendants
can all be made with sea glass.

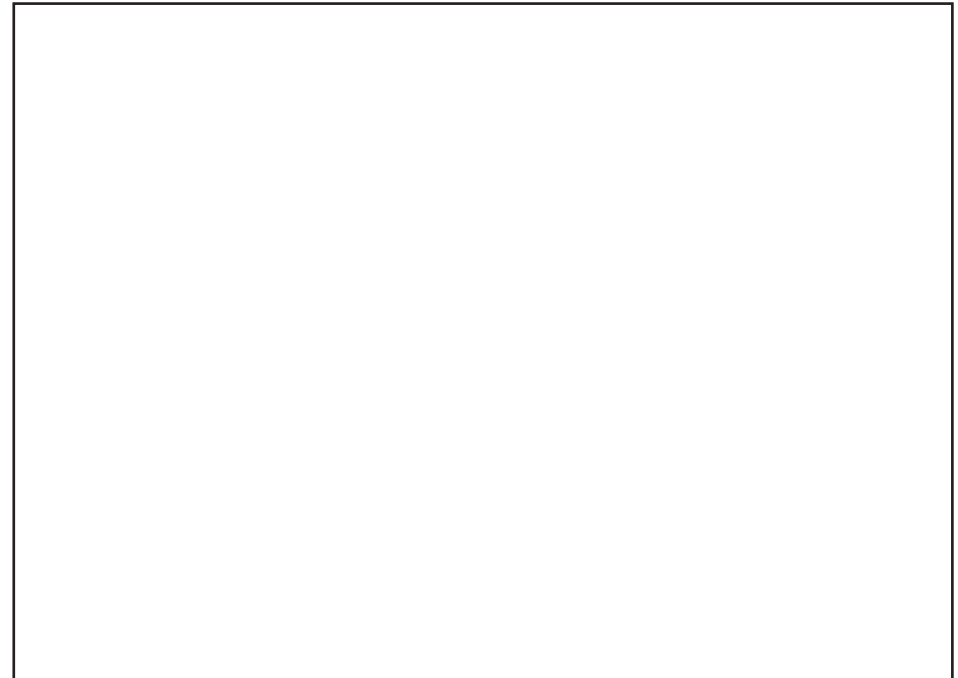

“Sea glass” is glass that has been polished by waves and sand.

2

It takes many years for sea glass to form. Over and over, the waves churn up the glass and sand. In time, each sharp edge will be worn away and polished.

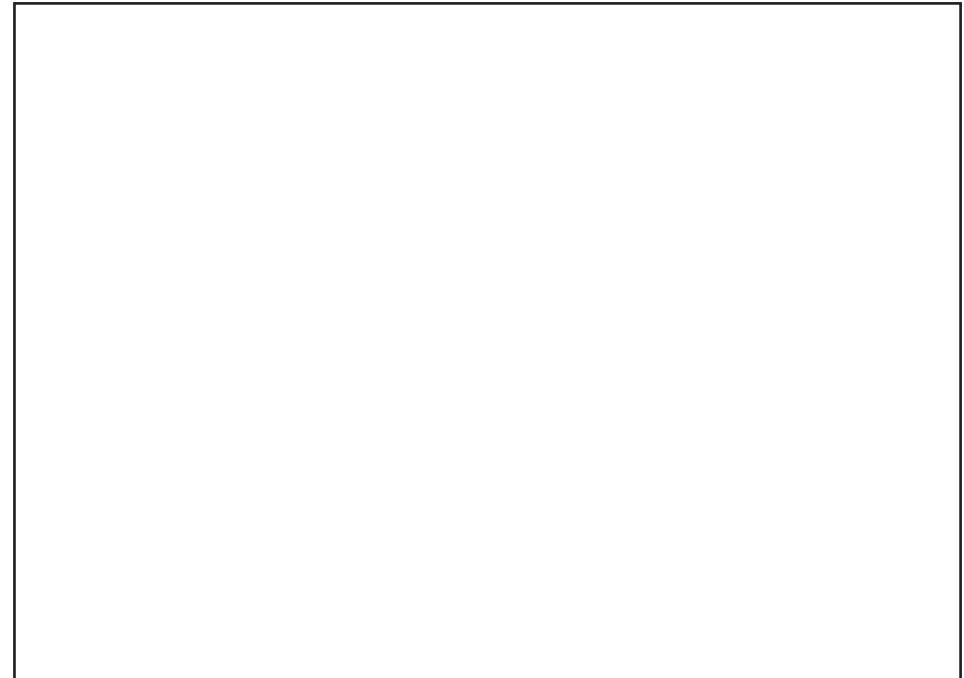

6

Beach glass is formed in fresh water. The water has no salt, so beach glass tends to be clear rather than frosted like sea glass.

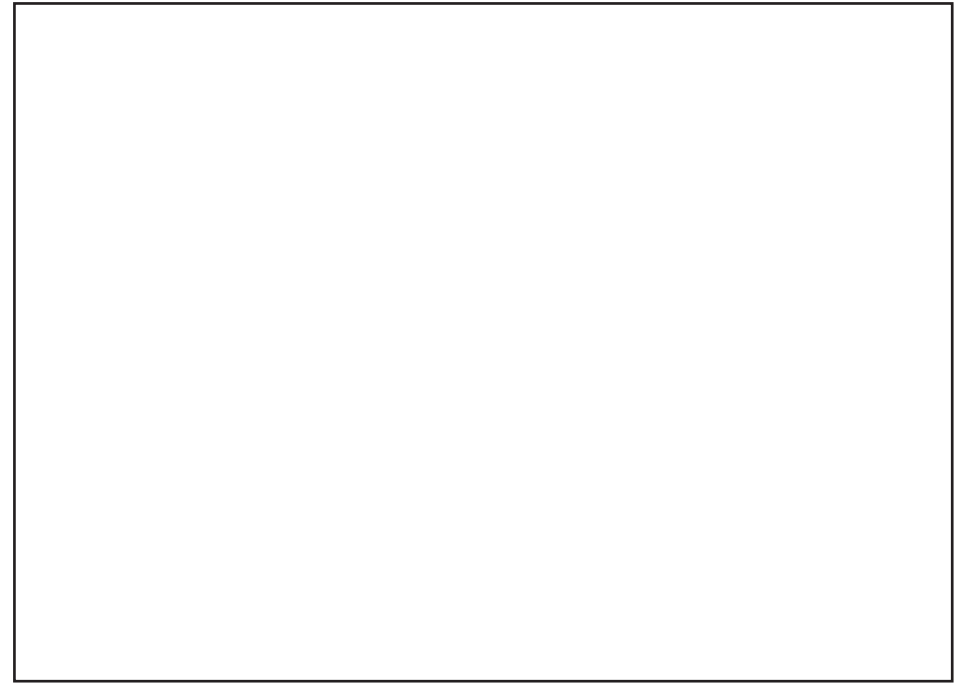

14

Sea glass might seem nice, but tossing glass into the water isn't right. We try not to do this today, so sea glass is getting hard to find.

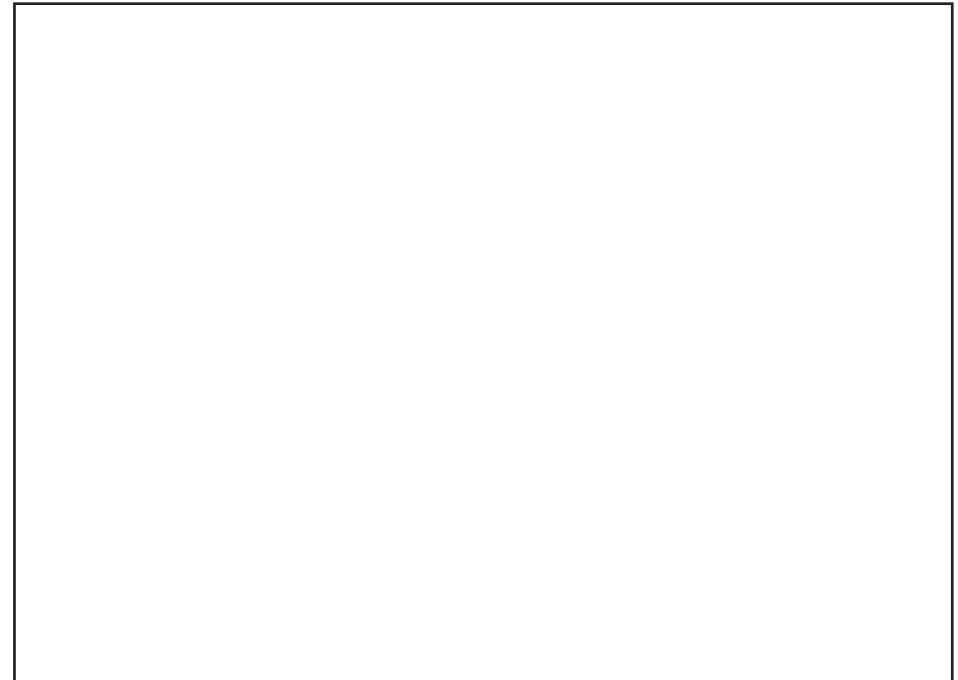

10

Sea glass starts as chunks of glass that have been tossed into the sea. Many kinds of glass, such as jars, dishes, or tiles, can turn into sea glass.

4

As each chunk soaks in the sea, the salt etches the glass and makes it appear frosted.

Once you start skiing or snowboarding, you will not want to stop. Have fun!

In the Snow

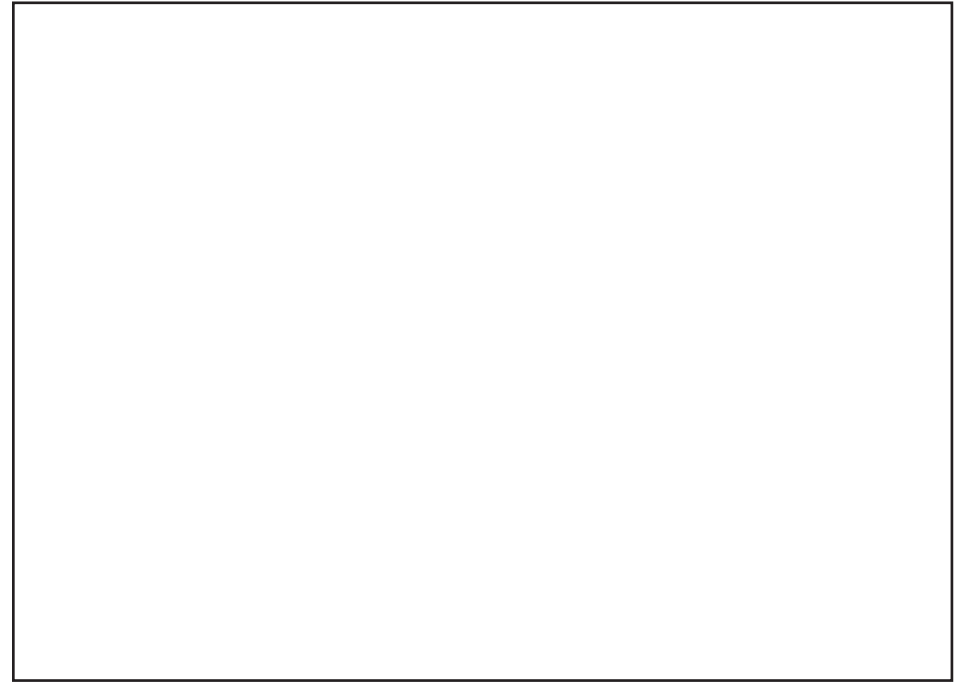

Written by Lee-Ann Lear

On a sunny day, the snow can be blinding! Snow is clear, but the sun reflects off the flakes and makes them seem bright white. Sunglasses can help with the glare.

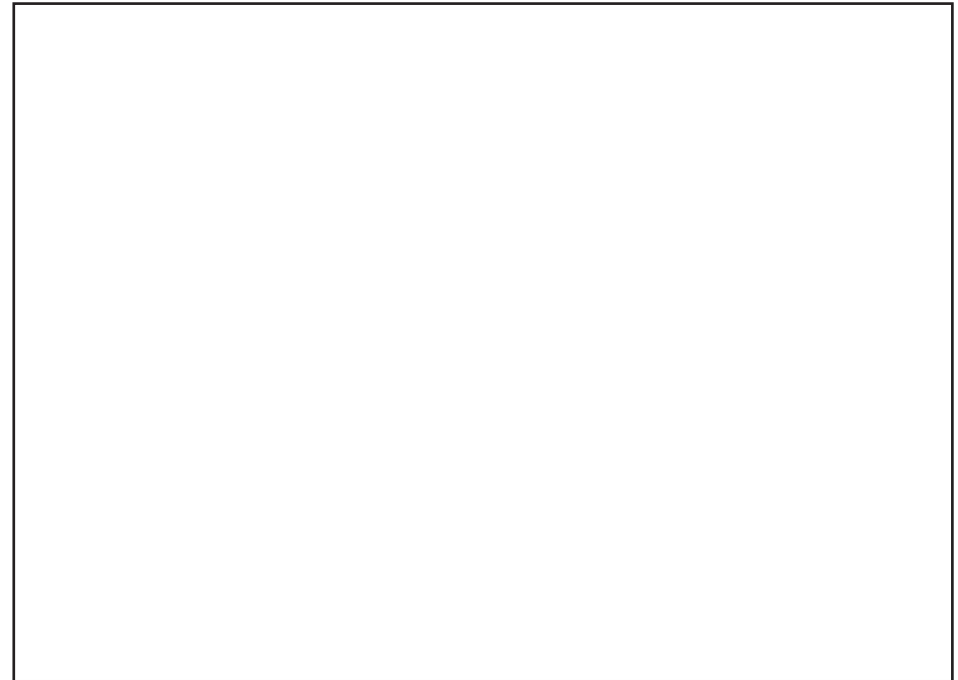

When summer has passed and the snow piles high, why not try skiing or snowboarding?

2

In time, once your balance grows, you can try steep hills. You can find many ways to reach the high slopes. These chairs will take you all the way to the top!

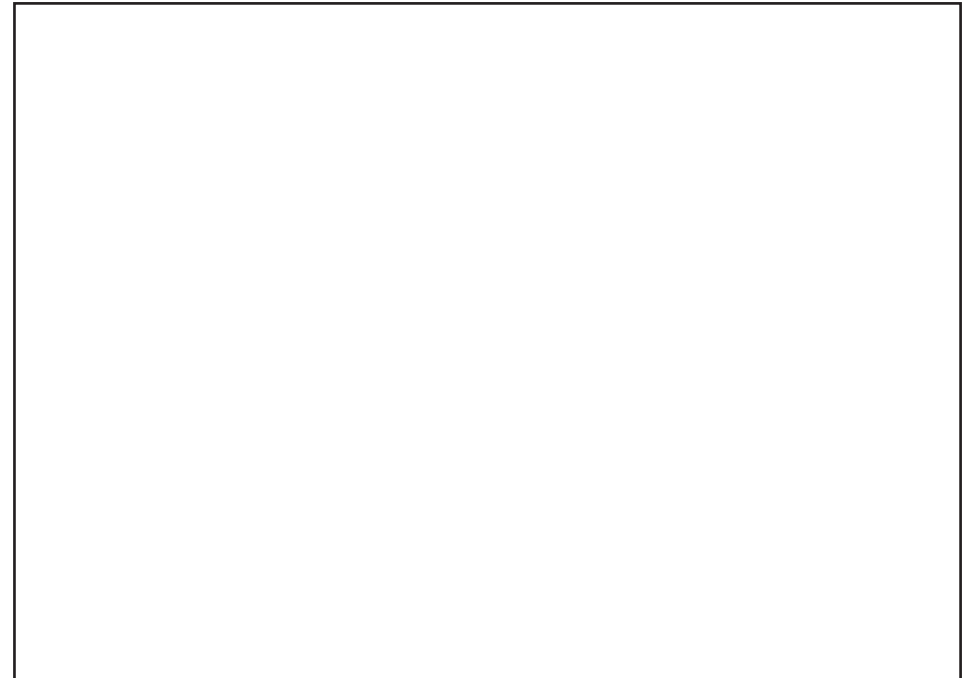

6

Blowing snow can make it hard to see. Follow the trail, or you might get lost.

14

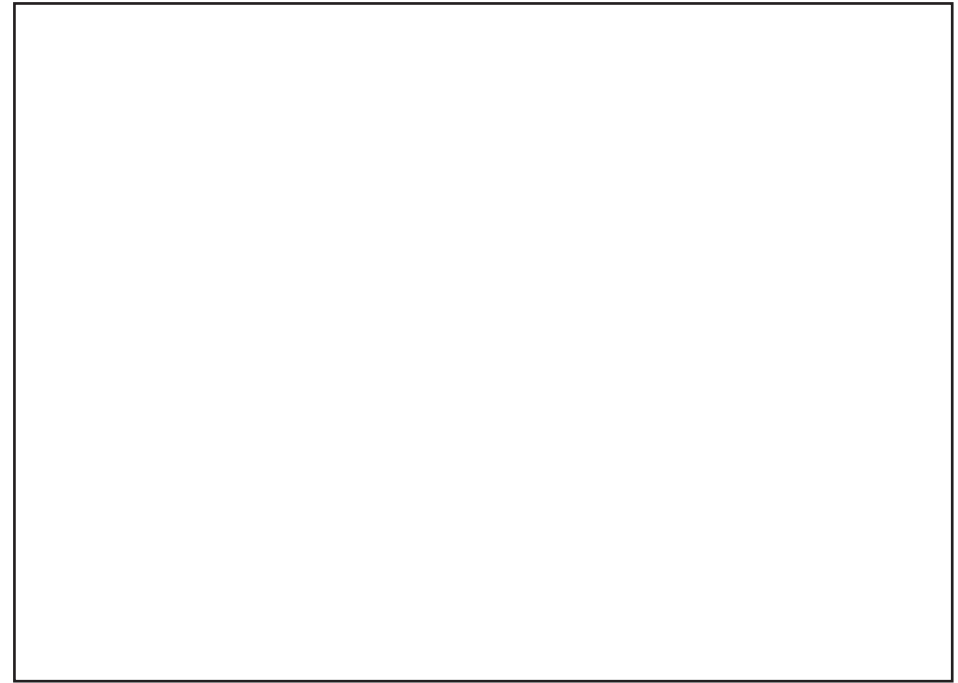

You need to prepare before you take part in winter sports. Dress for the cold, and follow the rules to keep the slopes safe.

10

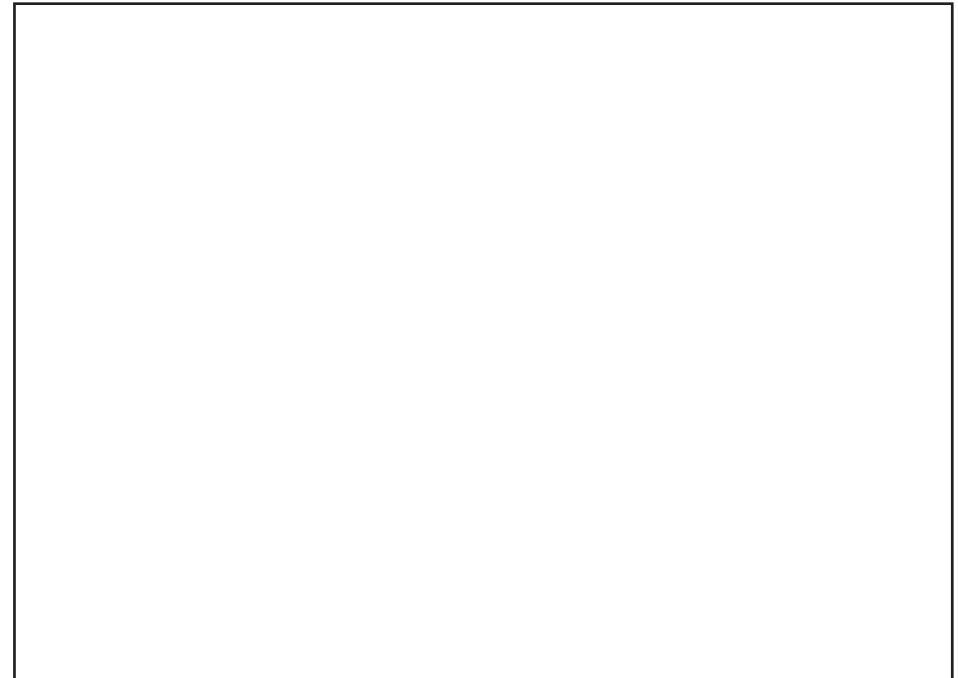

If you are just starting, you need to go at your own pace. Start slow. Bend your legs, keep low, and stay on the small hills.

4

Once you get better at skiing or snowboarding, you can speed up. You can zig and zag across each slope, and even try basic tricks or jumps!

These tools will help us if we decide to live in space one day!

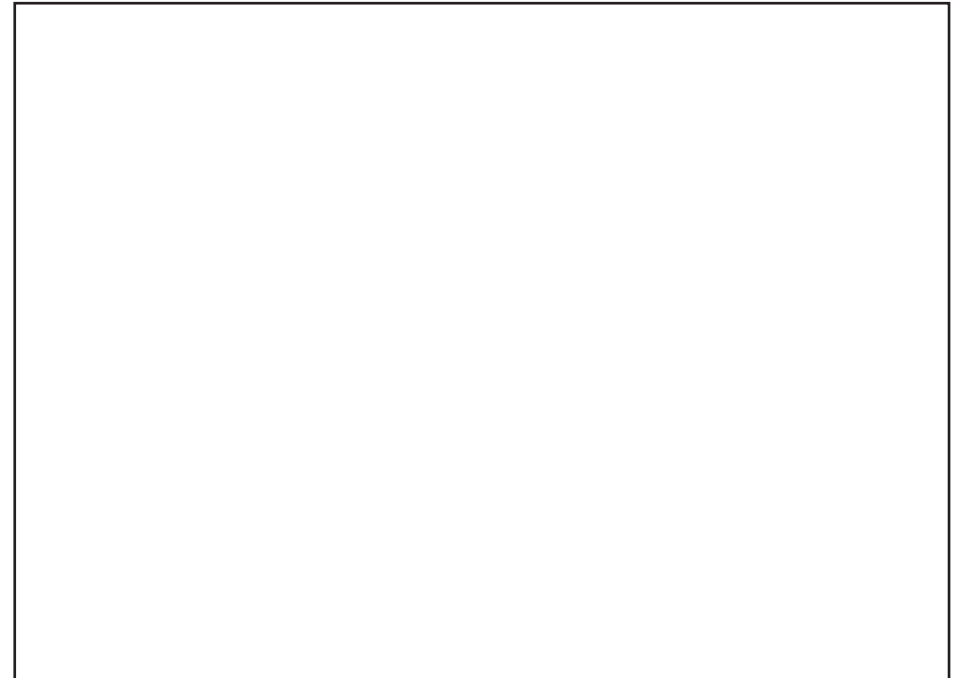

Space Tools

Written by Lee-Ann Lear

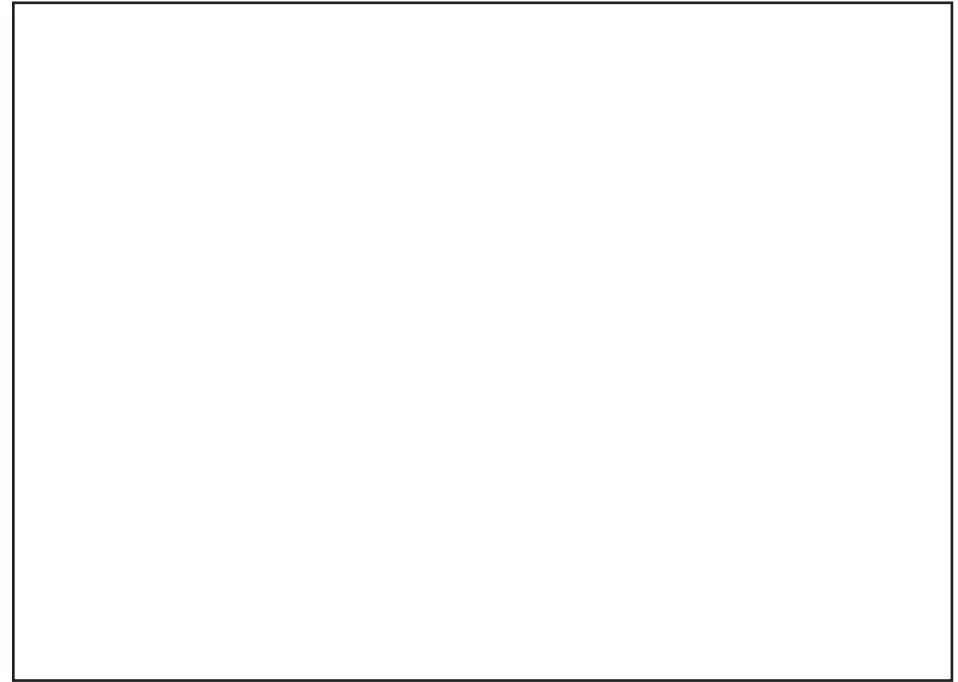

16

The basic goal of a Mars rover is to explore the planet Mars, and send back vital data.

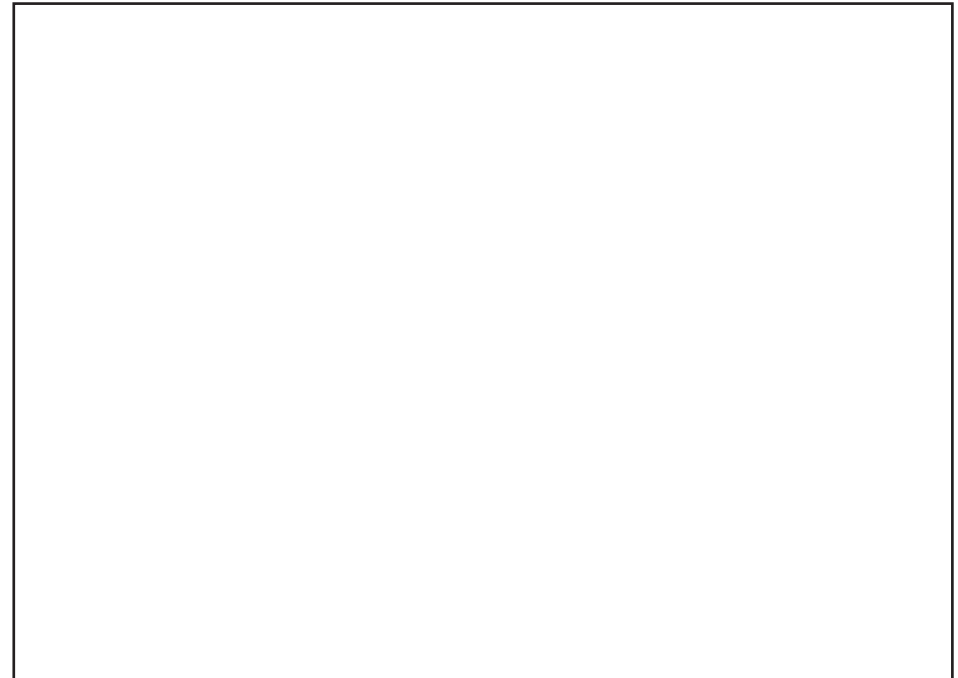

12

Many cool tools have been invented to help us visit and explore space.

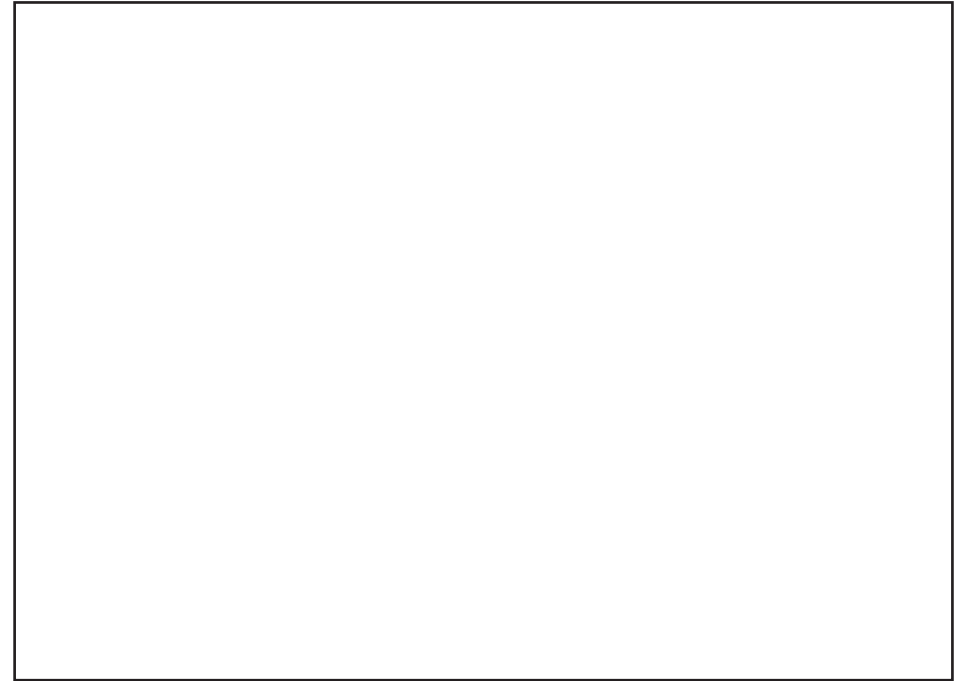

2

Soon, the Canadarm began its job. It transferred cargo, supported trips into space, and helped with minor repairs.

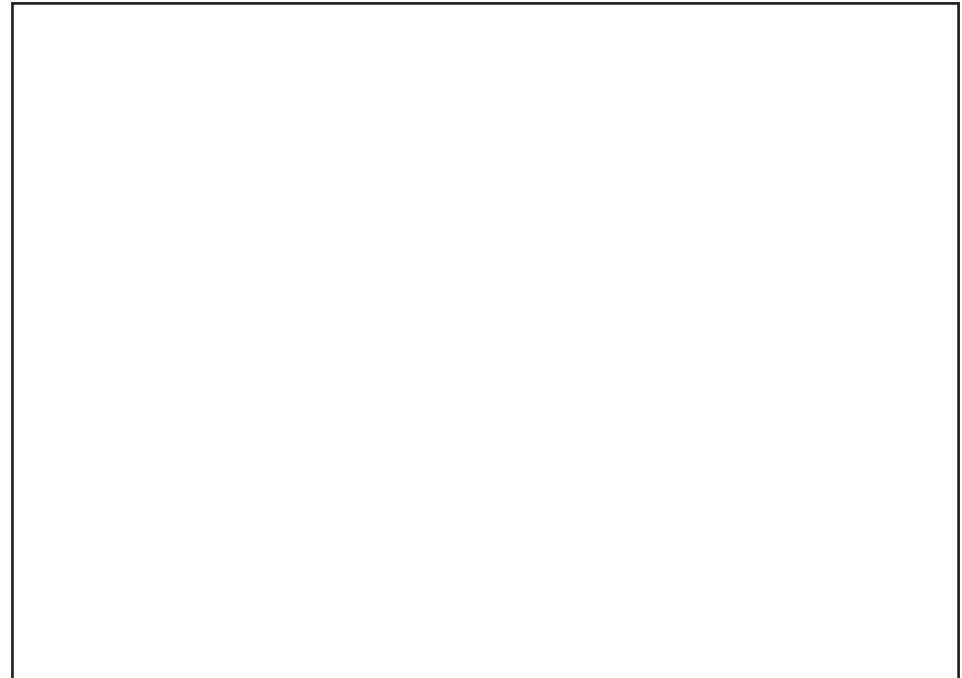

6

Solar panels are attached to the roof of each rover. The rovers drive across Mars, and use a number of tools to study the planet. Mars is not smooth. One rover got stuck in a crater filled with blown sand!

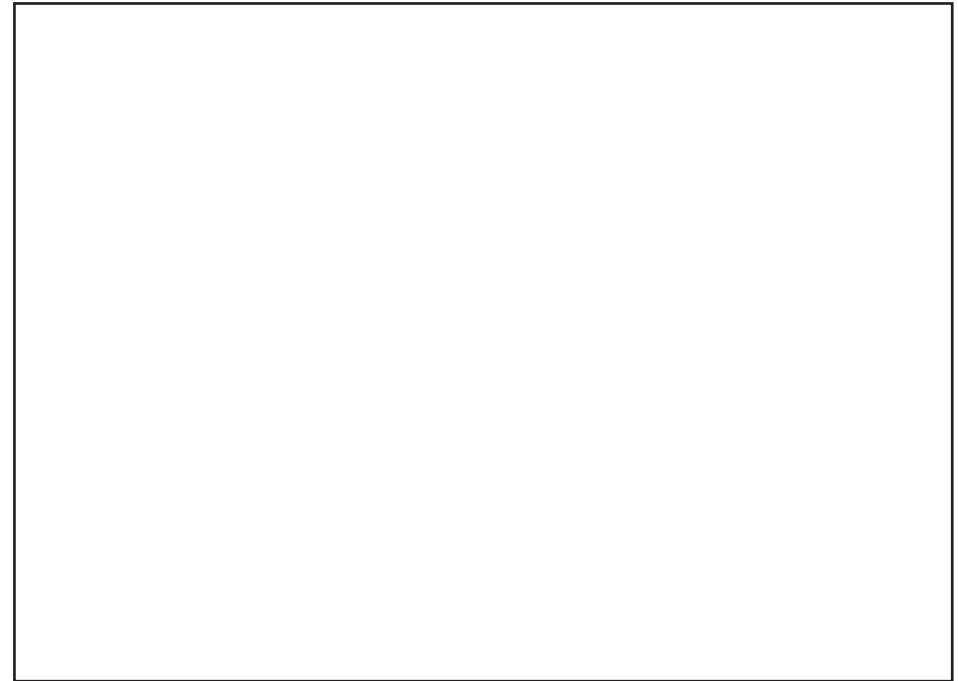

14

Mars rovers are cool space tools as well! Over the years, many of these robots have been flown to Mars.

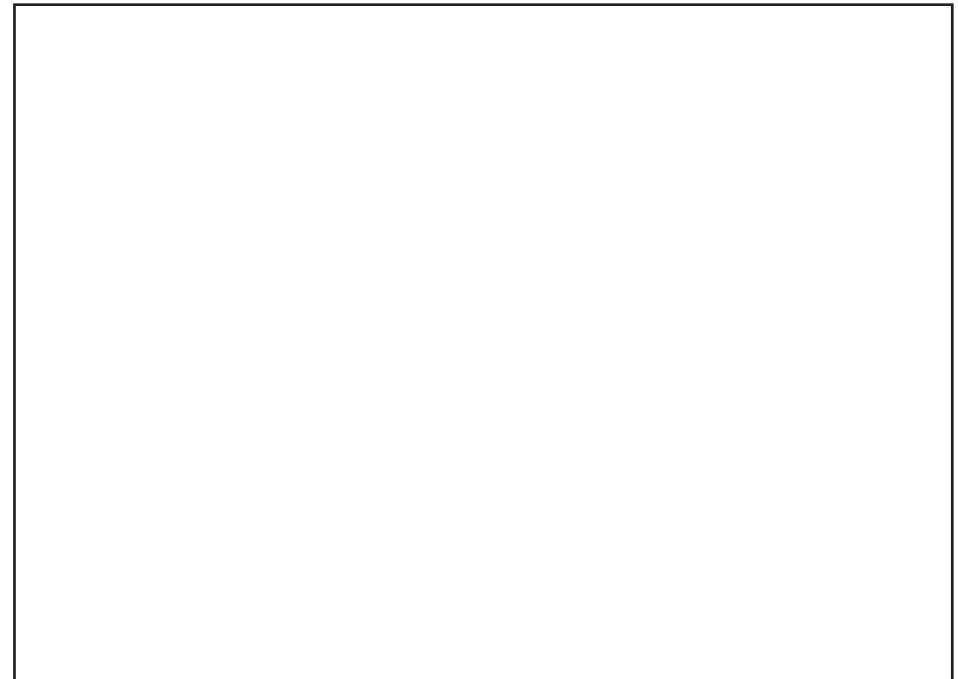

The Canadarm is cool! It was made to mimic a human arm with an elbow. It had a Kevlar coating to keep it from getting too hot or too cold. In 1981, it was sent into space.

4

In 2001, the Canadarm2 was also sent into space. It has a cool latching "hand" at each end, which can grasp items with a strong grip.

Enjoy your puppy time!

Puppy!

Written by Lee-Ann Lear

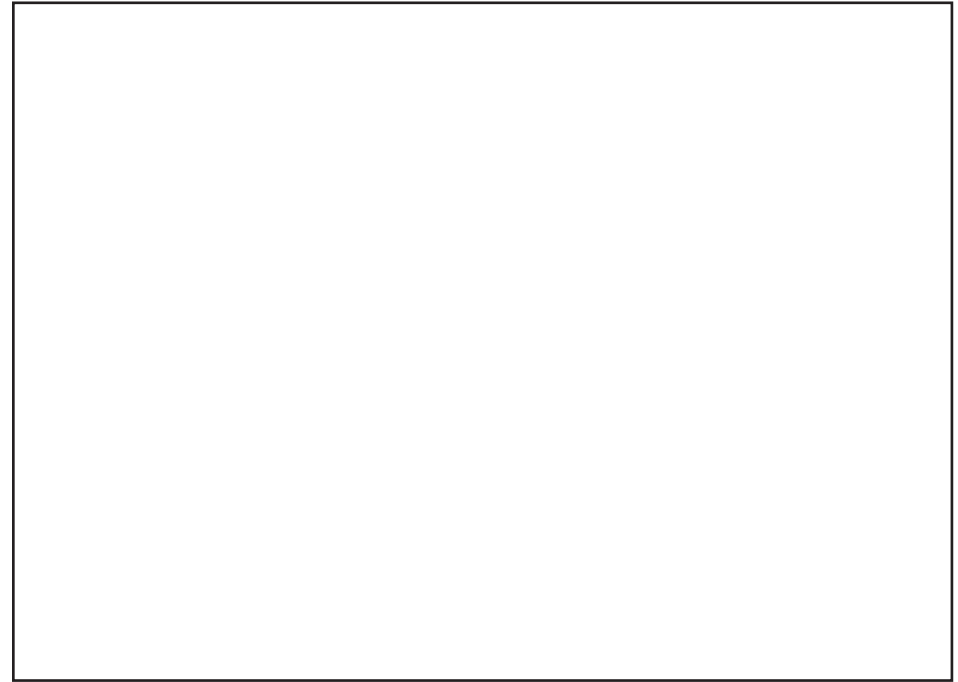

16

Make it a point to train your puppy. It needs to come when called, sit, and stay. Your puppy might get lost if it runs too far away.

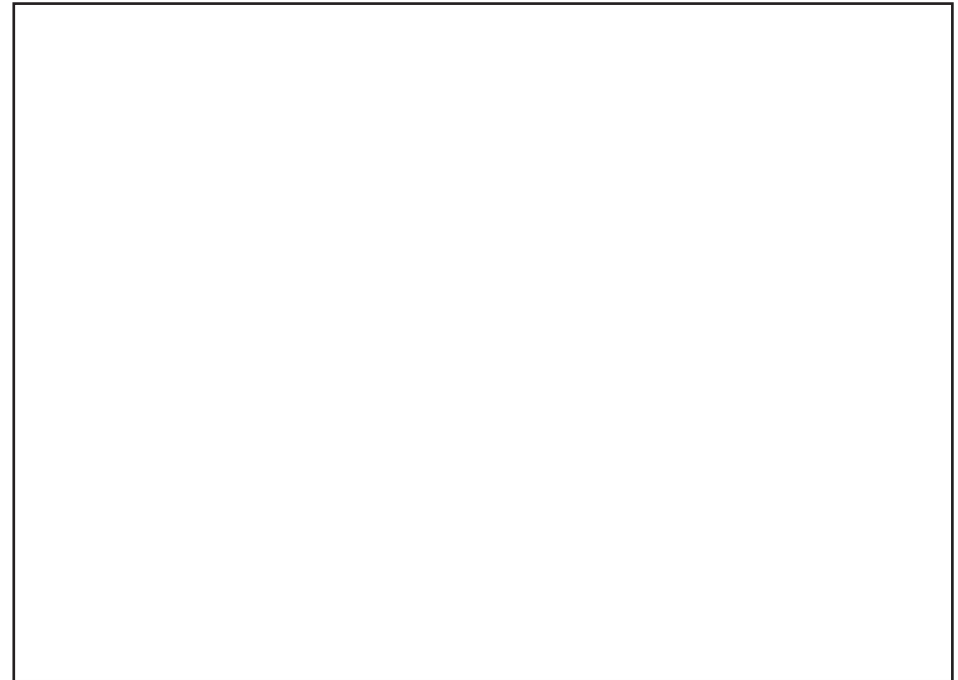

12

Have you ever wanted a puppy?

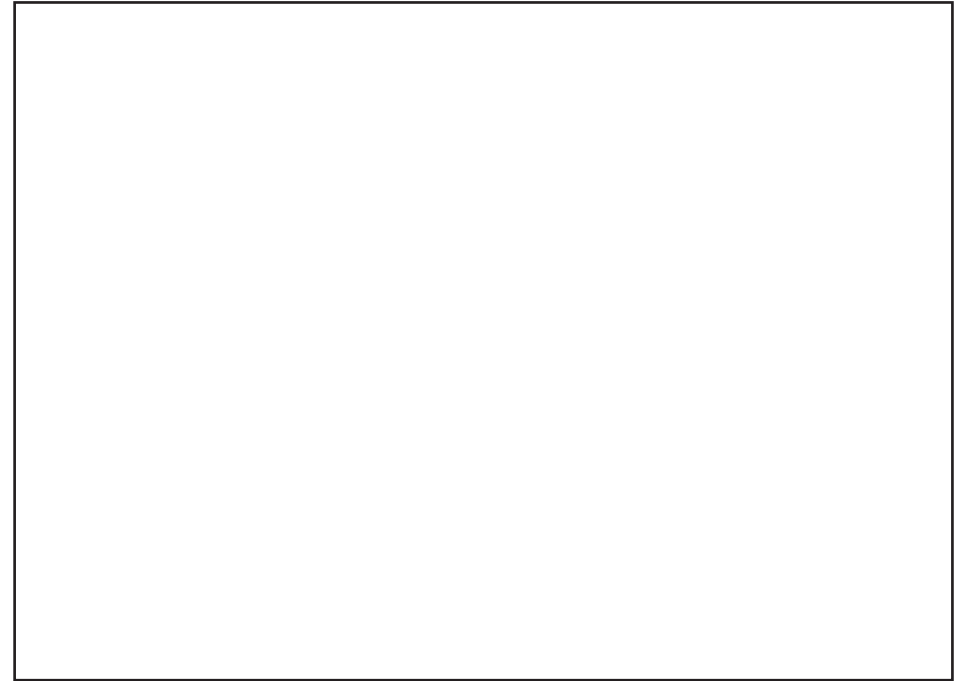

2

A puppy needs to be at least 8 weeks old before it can come to live with you. It can't take care of itself at this point, and still needs lots of help!

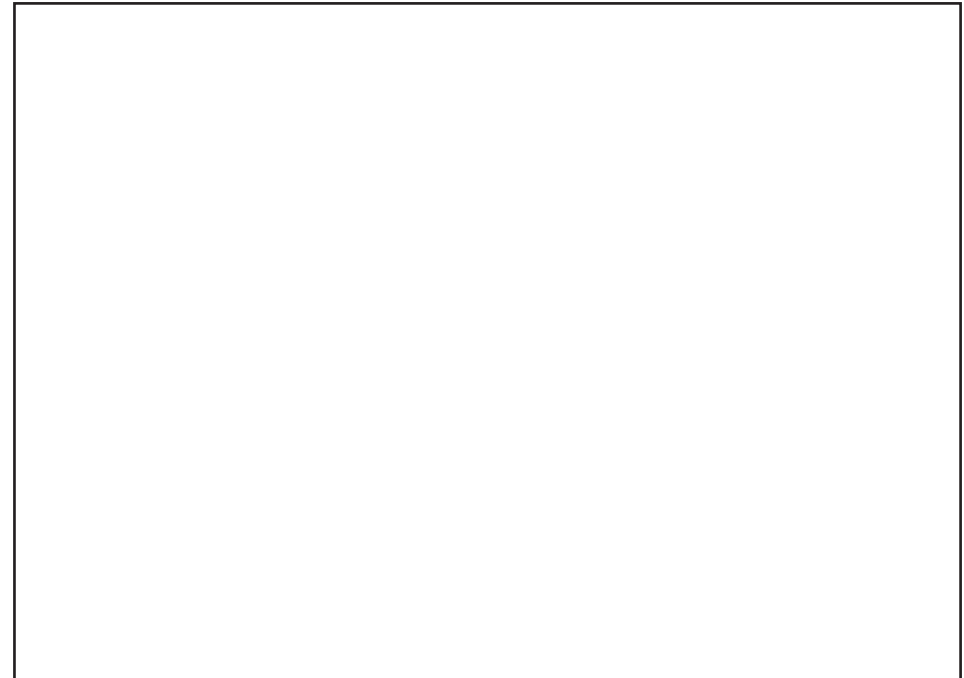

A puppy may bite and destroy items in your home once its adult teeth start to come in. To avoid this, let your puppy chomp on rubber dog toys.

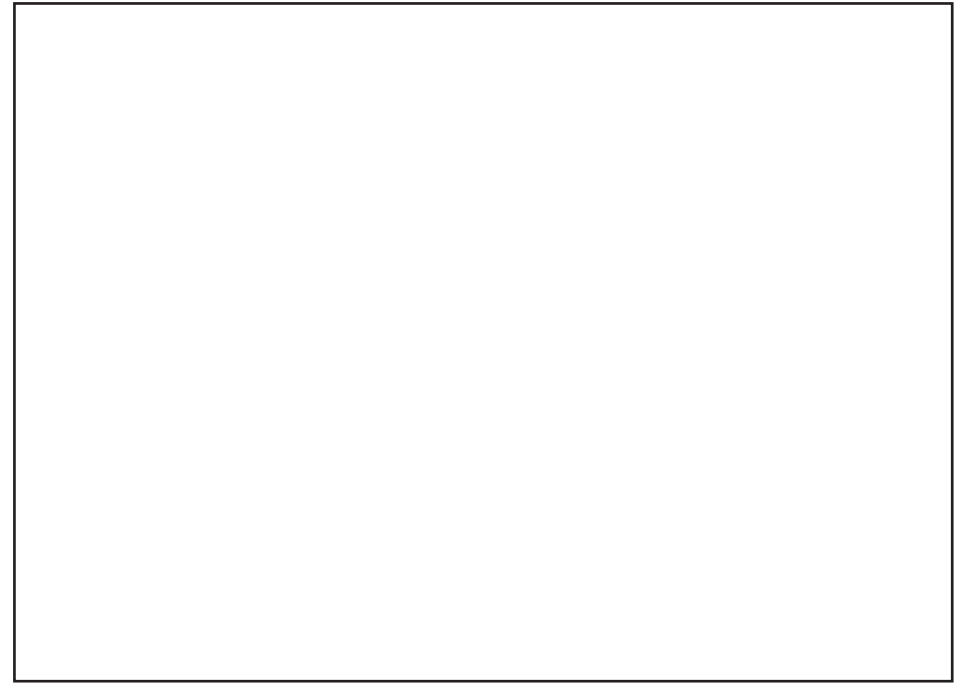

14

Keeping your puppy active is a must! It helps to have a wide choice of toys, or lots of room to run.

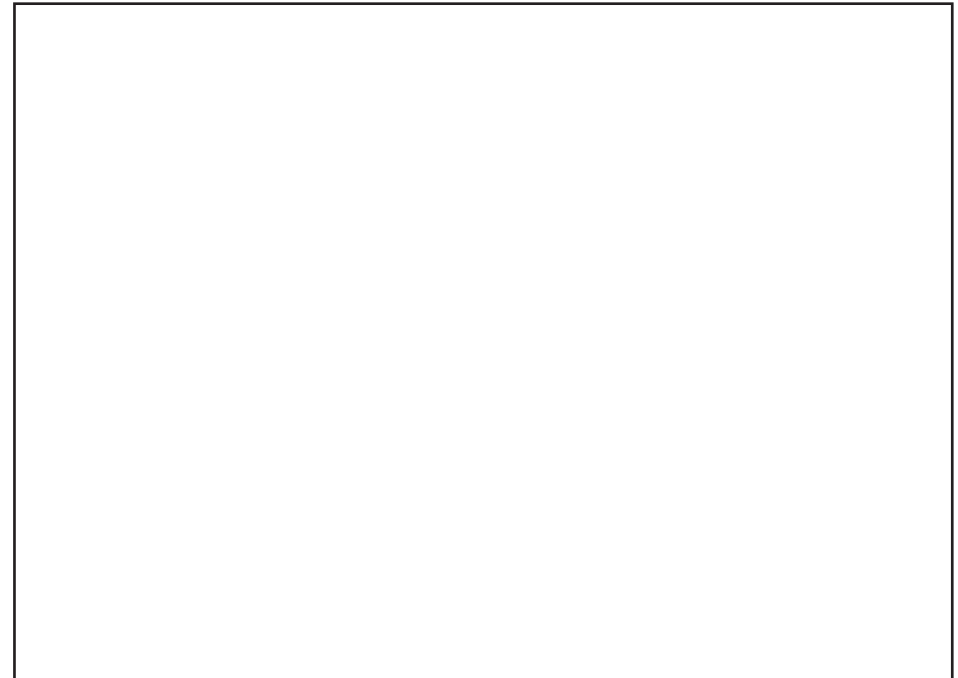

10

It takes a lot of effort to take care of a puppy, but a puppy can provide a lot of joy!

4

Your puppy will need its own place to sleep, and a spot to eat its food. It takes time for a puppy to adjust, so it's best to keep your voice low when your puppy first comes home.

If you visit the coast,
try scouting for orcas!

Orcas

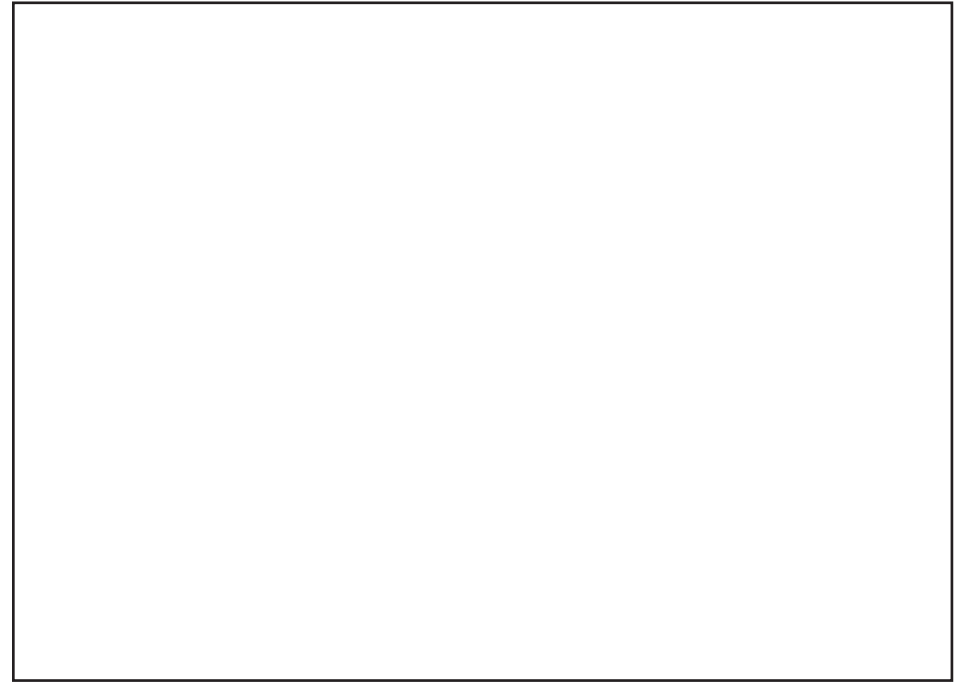

Written by Lee-Ann Lear

After about ten weeks, a calf's
teeth will come in. These teeth
are sharp, and ideal for
grasping and ripping food.

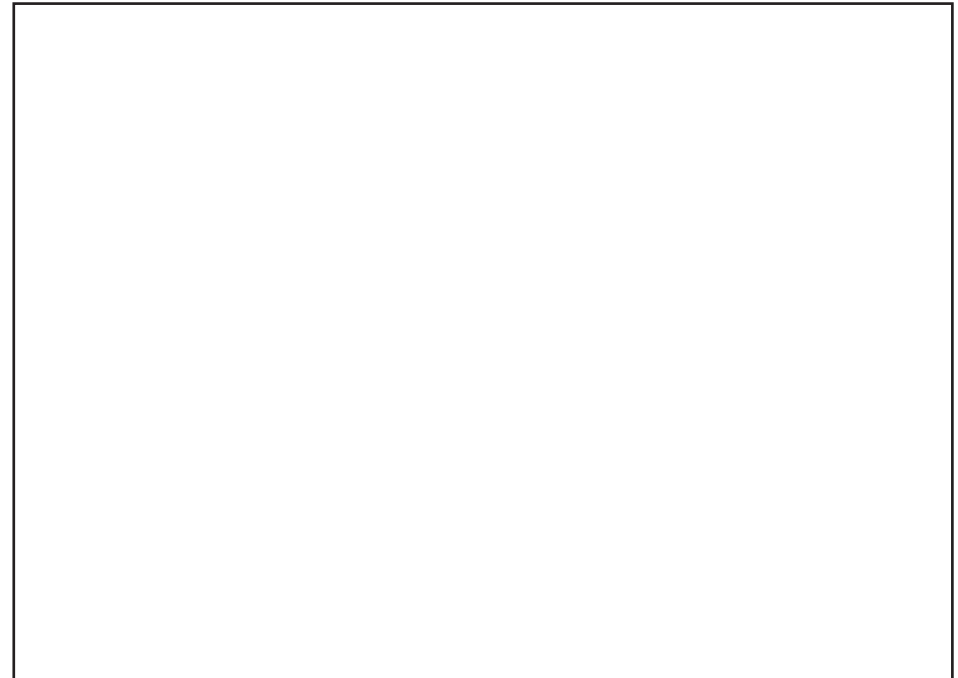

Orcas, also called “killer whales”, live in our oceans.

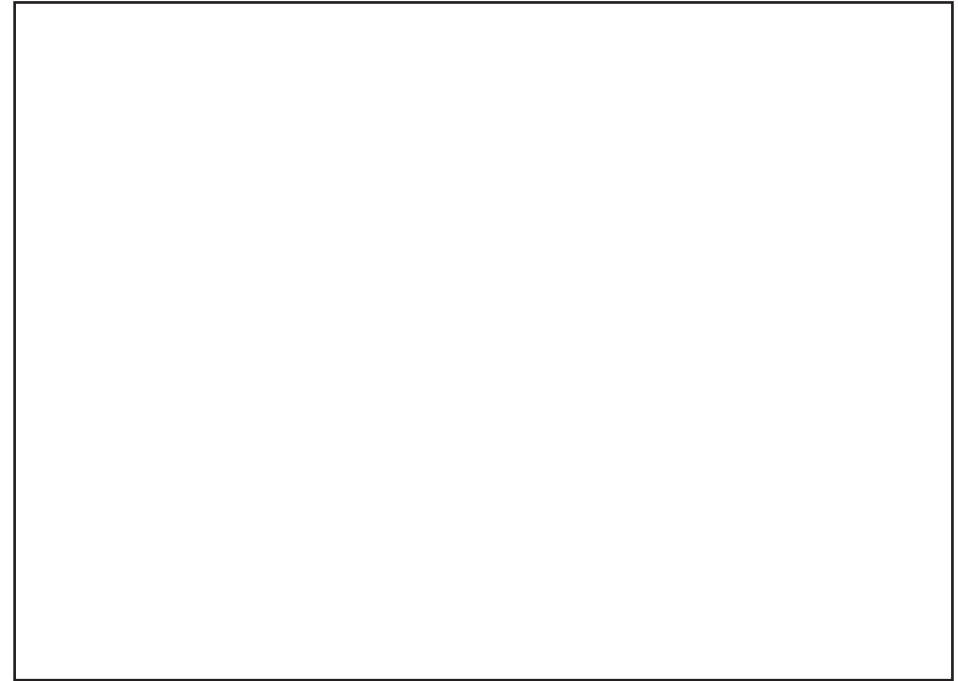

2

A pack of orcas is called a pod. Orcas make a number of sounds, such as clicks or pops. These loud sounds can help an orca locate or stay close to its pod.

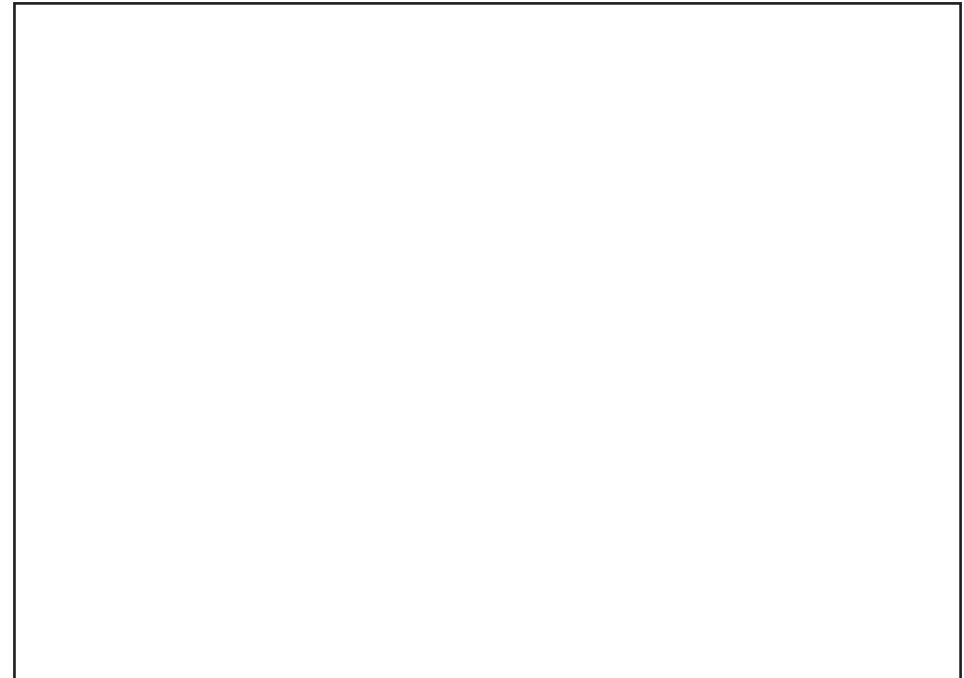

6

Orcas can swim deep under the water, but they must come up for air. Many orcas enjoy jumping out of the water, which is called “breaching”.

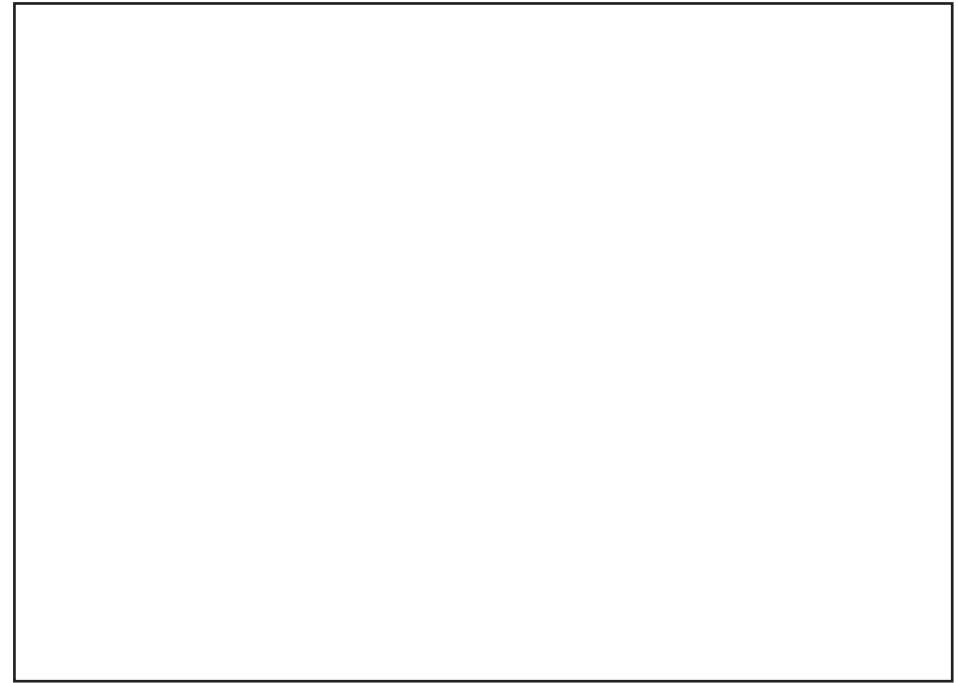

14

An orca baby is called a calf. A calf will join its mom's pod once it's born. Orcas are loyal. Adults in the pod will stay around the calf, and protect it if needed.

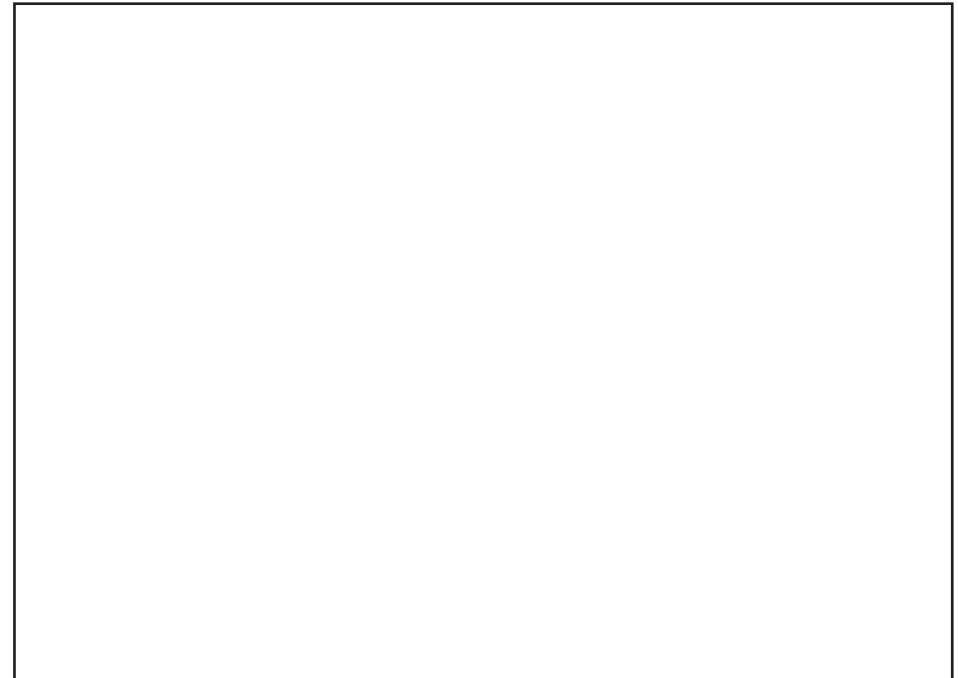

10

These mammals can be found in all oceans, but are most often spotted in cold water, close to coasts.

4

Pods are often found hunting as a team. One method they use is to herd fish into a tight space. An orca will then strike the fish with its tail to stun them.

Do you prefer
towers or tunnels?

Towers and Tunnels

Written by Lee-Ann Lear

16

The subway travels in this
tunnel. The tunnel provides a
direct way to get from one
point to the next, while avoiding
the crowded streets.

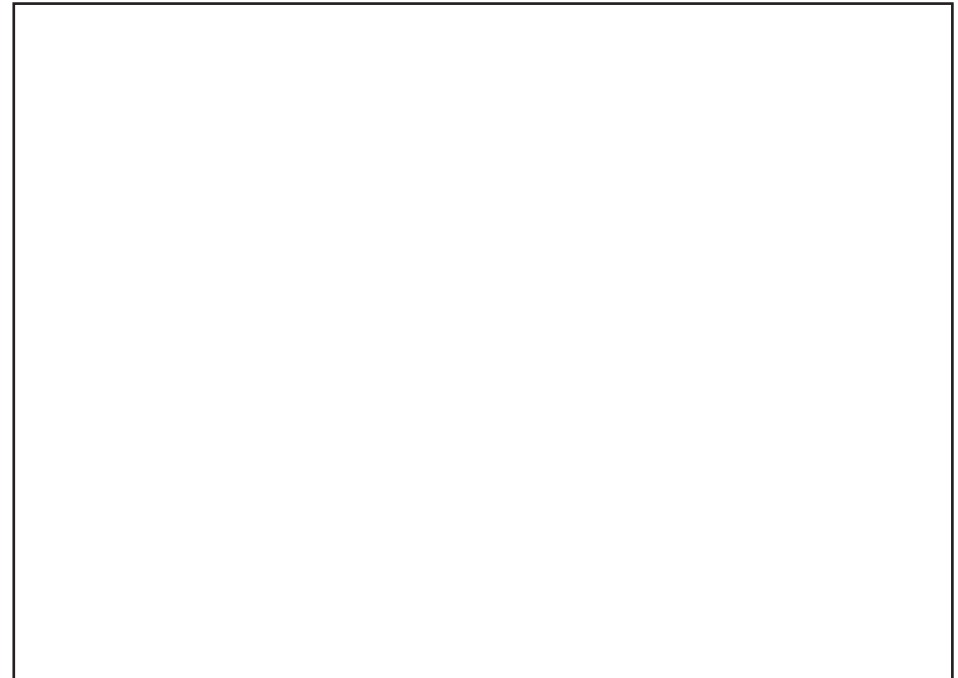

12

Do you like going up high?
How do you feel about going
down under the ground? In a
city like Toronto, you can find
many towers and tunnels.

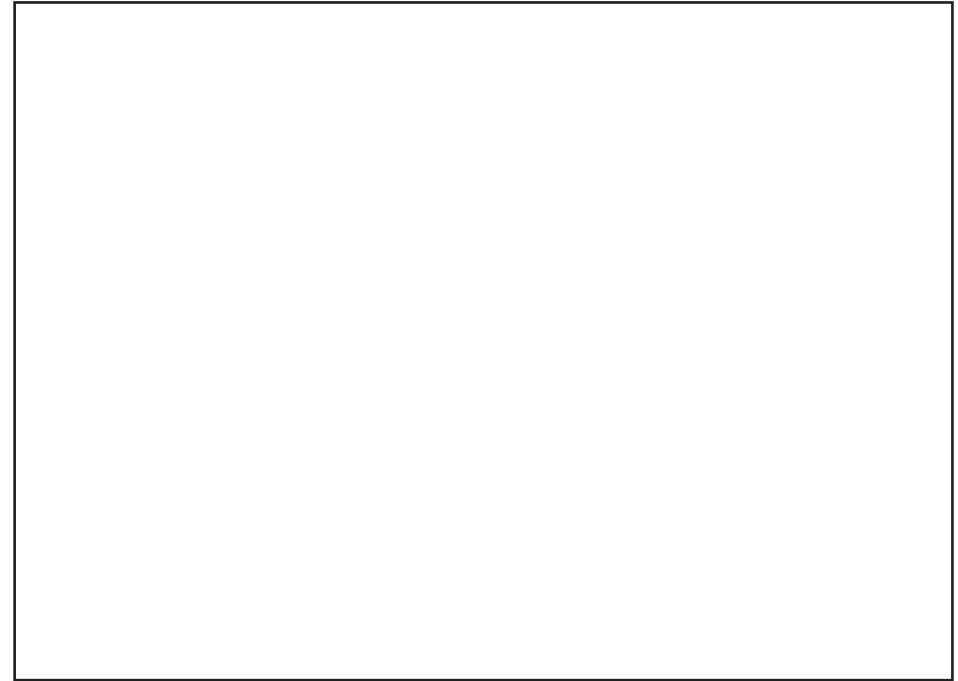

2

This tower is called the
CN Tower. Crowds of people
come to visit it each day.
It's a long way up!

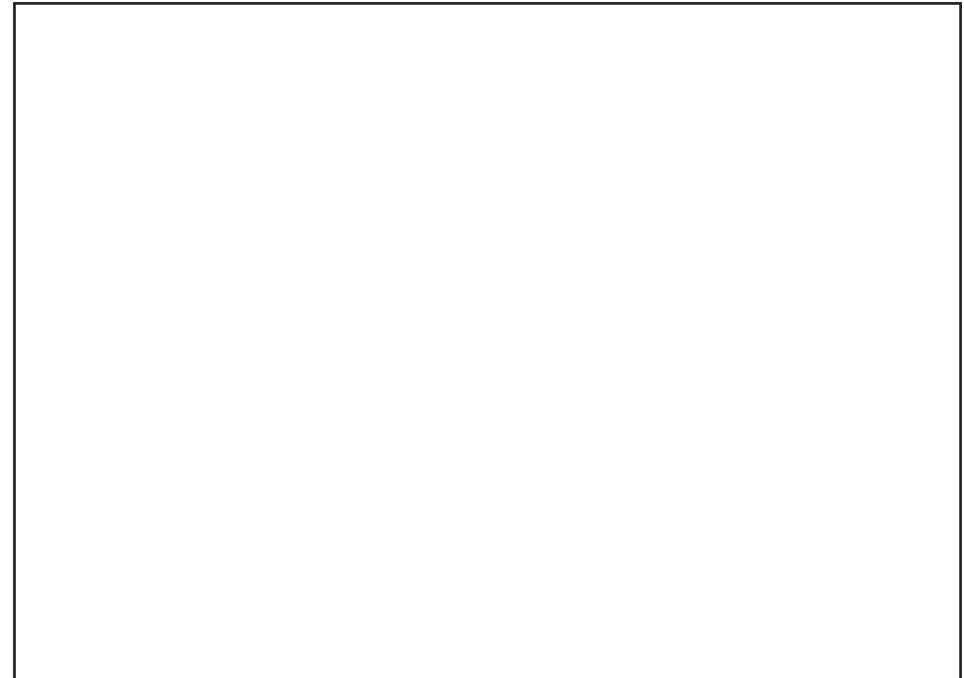

The PATH also runs under the city. This web of pathways joins the basements of many downtown towers. People can use the PATH to stay cool in summer, or stay dry if it rains.

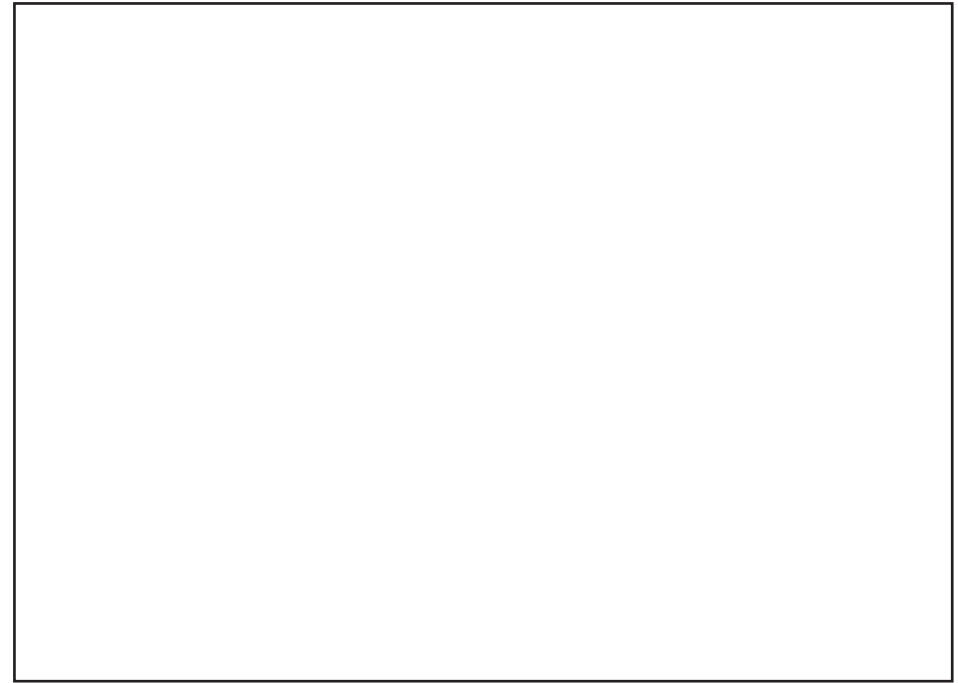

14

Tunnels in the city can be big or small, and they allow people to travel under the ground.

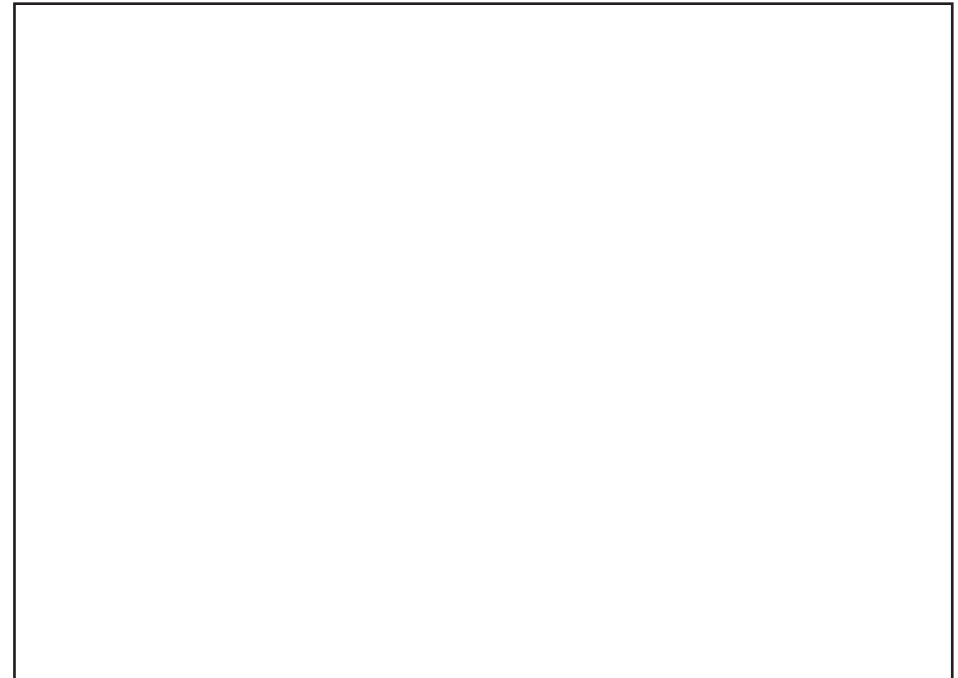

Towers can stretch high above the streets. If you live near the top of a high-rise, you can see far into the distance. It is quite a sight!

4

At the top of the CN Tower, you can enjoy a meal, check out the sights, or stand on the glass panels and peer down. Wow!

Made in Canada

Find a nook and enjoy your book!

Books

Written by Lee-Ann Lear

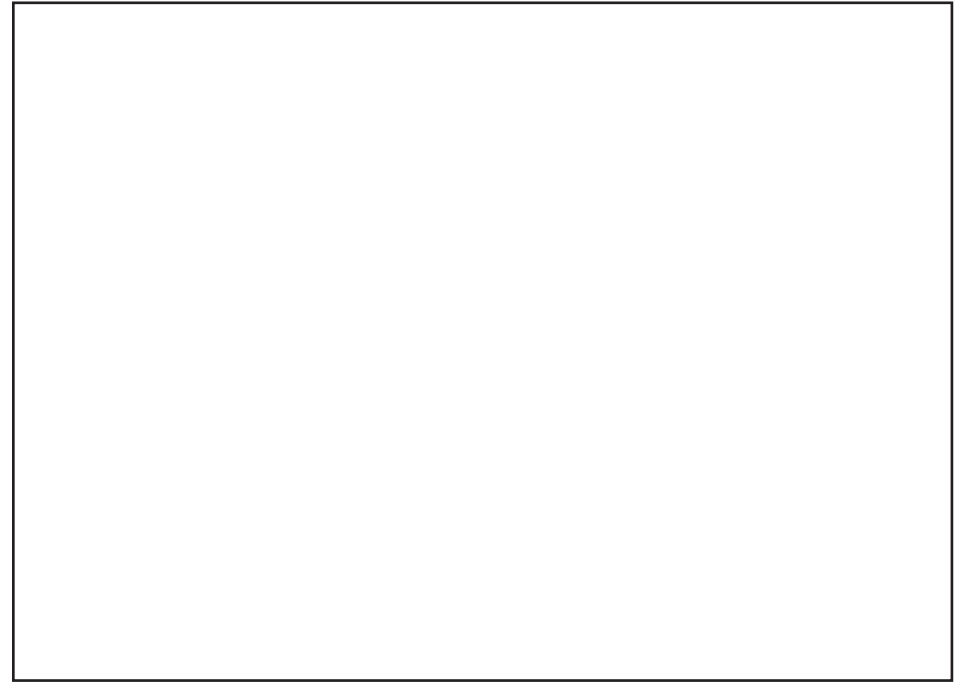

16

Next, the covers are added,
and the books are bound. The
goal of the binding process is
to make a strong book.

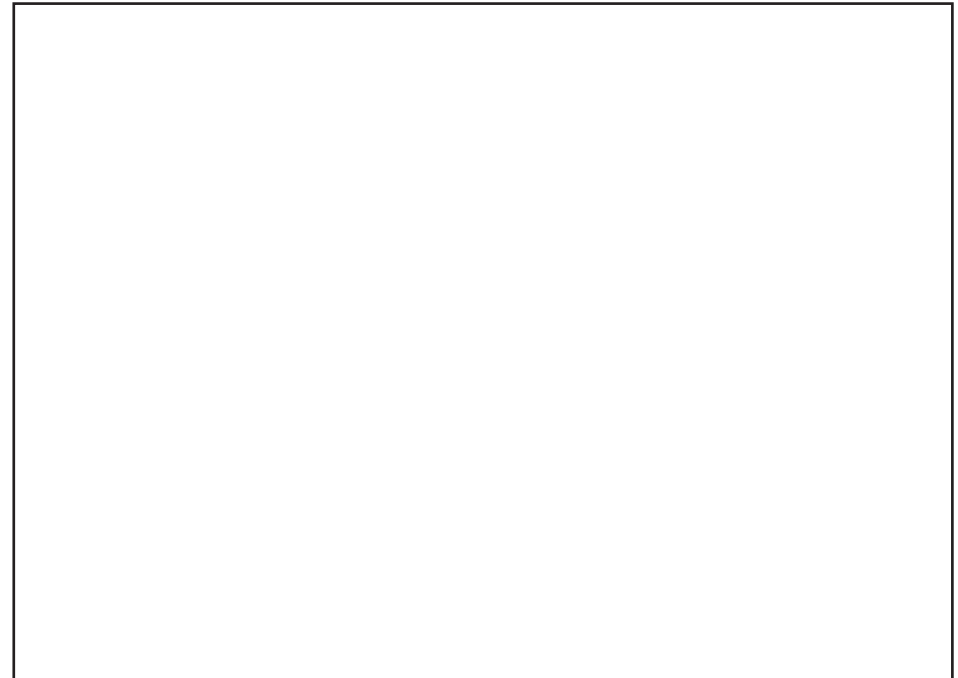

12

Reading a good book is fun!
Do you ever think about how
books are made?

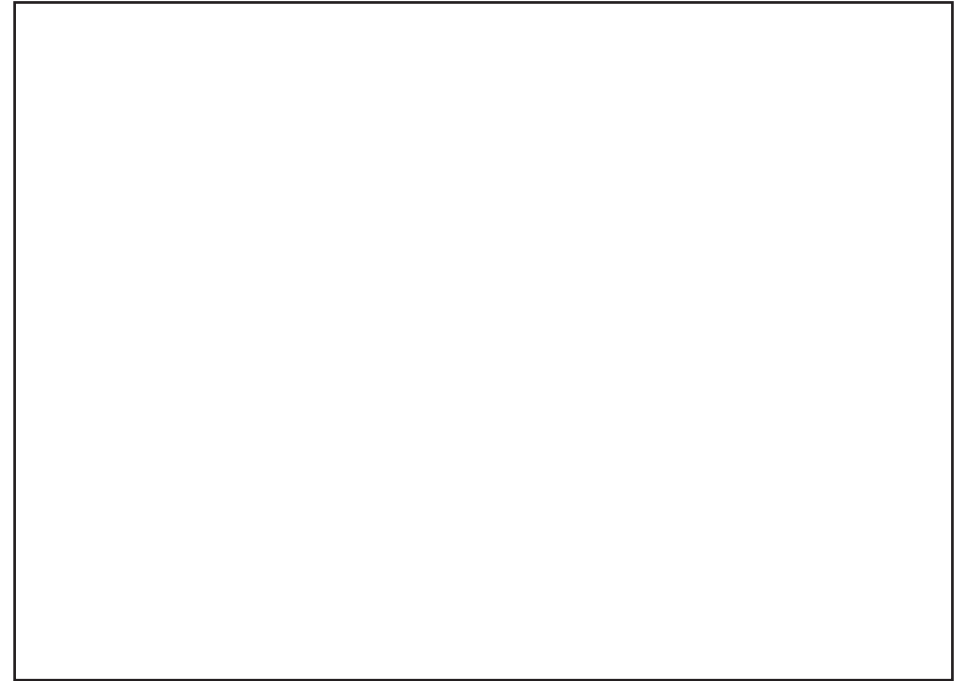

2

The first step is to make a file
that contains your book. The
file will hold the text of your
book, and will include basic
details on its shape, size, look,
and feel.

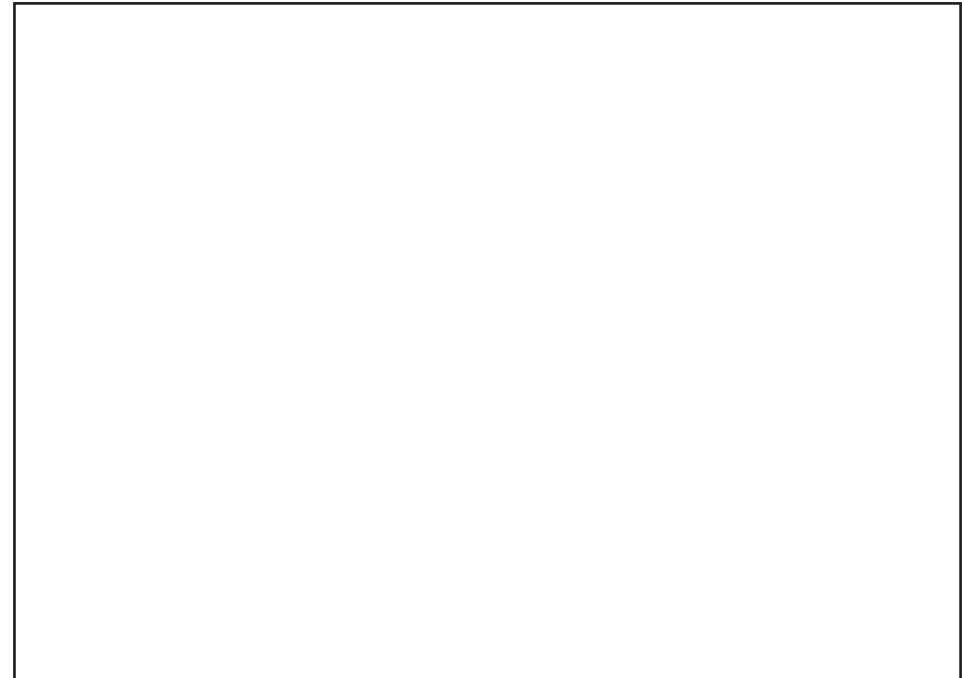

6

The final step in the process is to pack up the books and send them out to you!

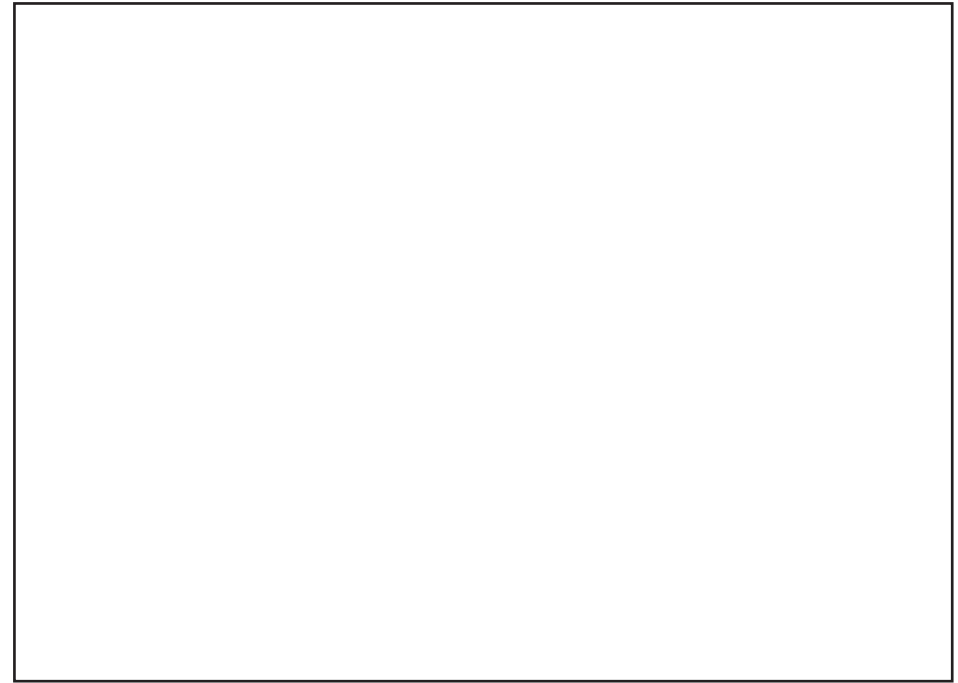

14

These printed sheets will be sorted, stacked, cut, and folded. Allow time for this vital process. The cuts and folds need to be exact. Even a minor slip can result in crooked books!

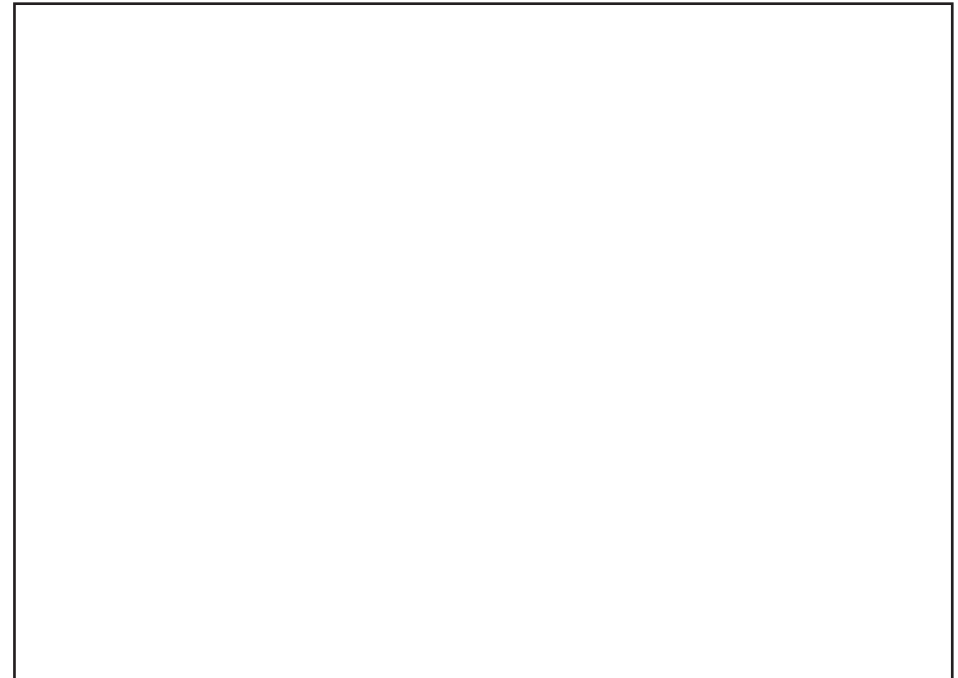

10

Many kinds of books are printed each day. Cookbooks, comics, fairy tales, and novels all start out as a plan, then follow the printing process to come to life!

4

Once your file is finished, your book can be sent to the printing press. The press will read your file, then print your book on big paper sheets.

Educators have requested supplementary, practice, or take-home resources for students who are currently reading SyllaSense books in their classrooms. These image-less, printable resources will allow students to have their own copies of SyllaSense books, with their own illustrations, which can be taken home for practice. The intent is for these printable resources to be used in classrooms that are currently using SyllaSense Decodables in literacy instruction.

SyllaSense hereby grants royalty-free permission to print, share, and/or reproduce this image-less book in digital or print formats provided that the following conditions are met:

1. All recipients of printed copies of this image-less work are eligible users - users that have access to the full, imaged, and purchased book of the respective title
2. No modifications may be made to any digital copies of this copyrighted work
3. This work may not be combined with any other work (in digital or print format)
4. All reproductions must consist of the complete work (with the exception of this instruction page in printed reproductions)
5. No fees, costs, or any form of remuneration may be charged or requested for any copies of this content (either digital or print copies), including the materials or time required to create such reproductions
6. Neither the name of the copyright holder, nor the names of its contributors may be used to endorse or promote any product or service without specific prior written permission
7. Any digital/online links sharing this content must credit SyllaSense as the originator of the content

INSTRUCTIONS:

This document is designed to be printed double-sided on letter paper. Once printed, cut along the dotted line and discard the bottom half of the front page (these notices and instructions). Place the pages from the top half on top of the bottom half. Fold pages in half, then staple.

Clever dolphins!

16

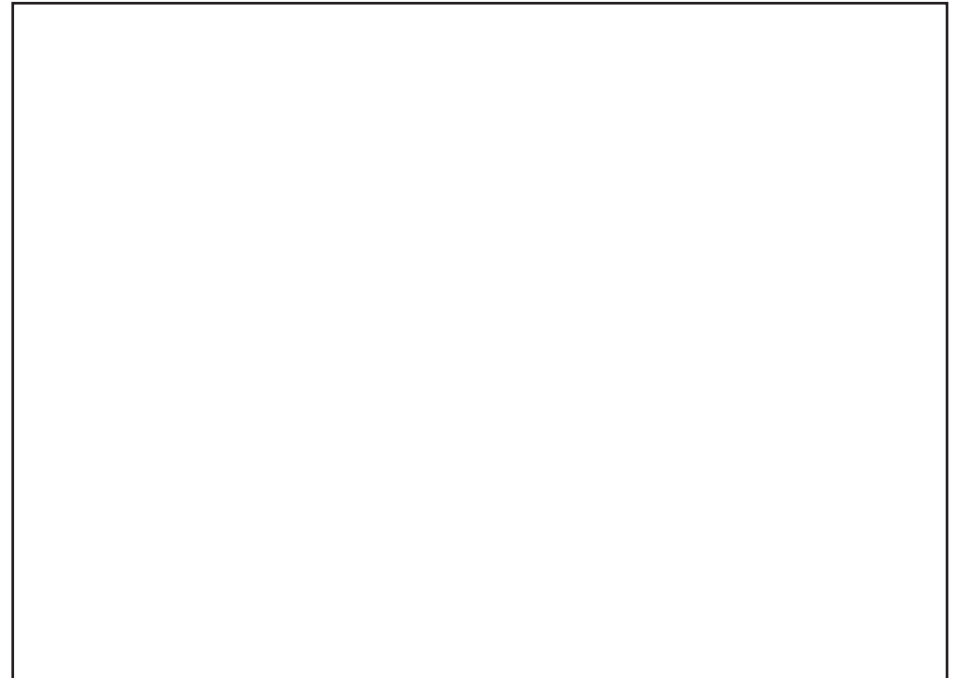

Most dolphins live in saltwater seas and oceans, but some dolphins have adapted to live in freshwater rivers.

12

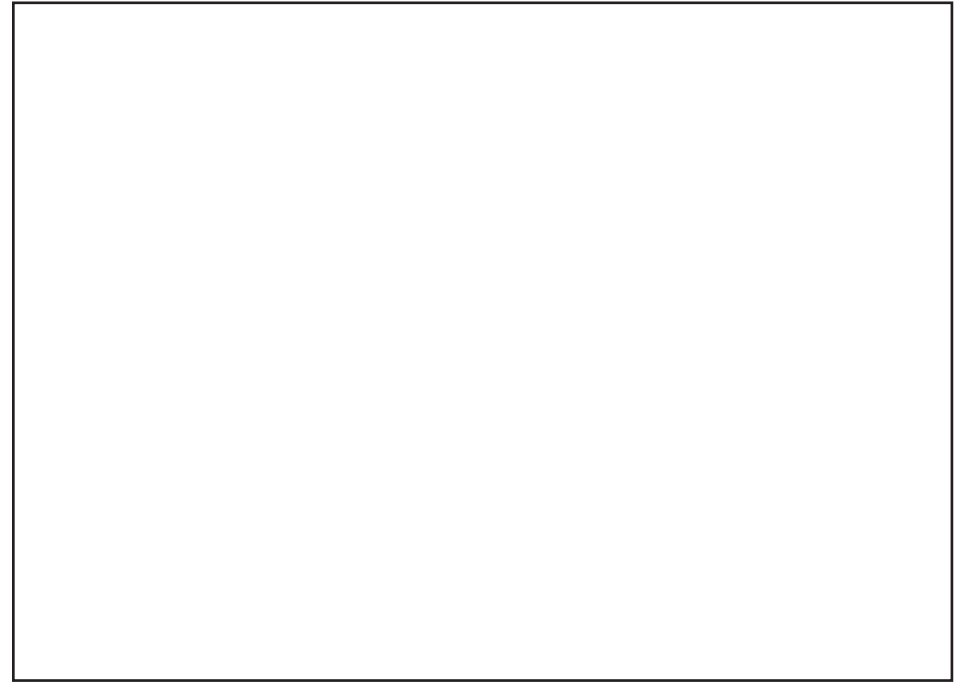

Clever Dolphins!

Written by Lee-Ann Lear

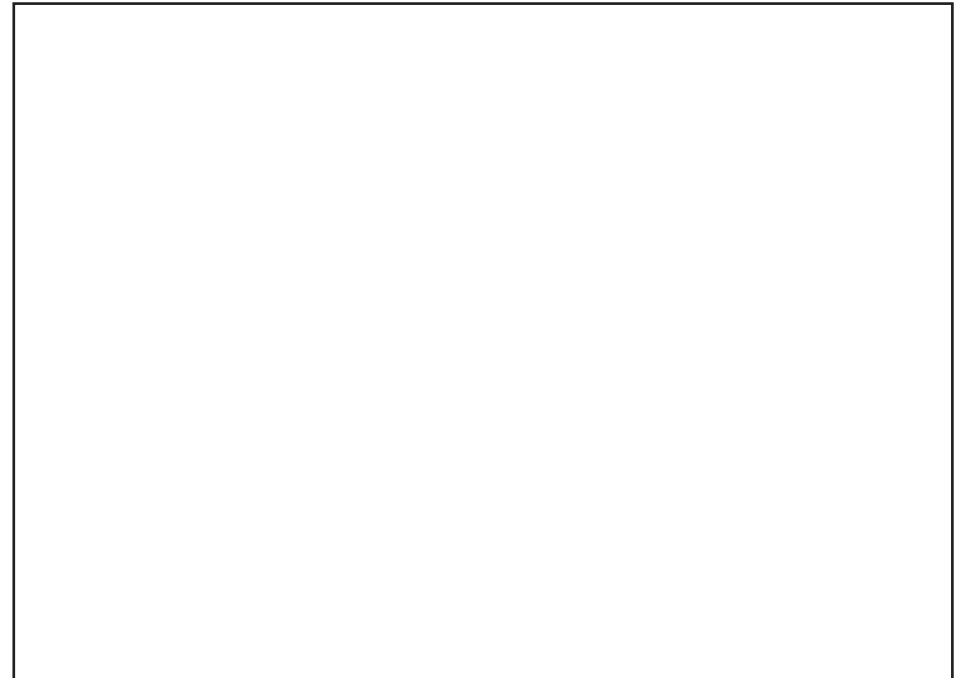

Dolphins are super smart mammals!

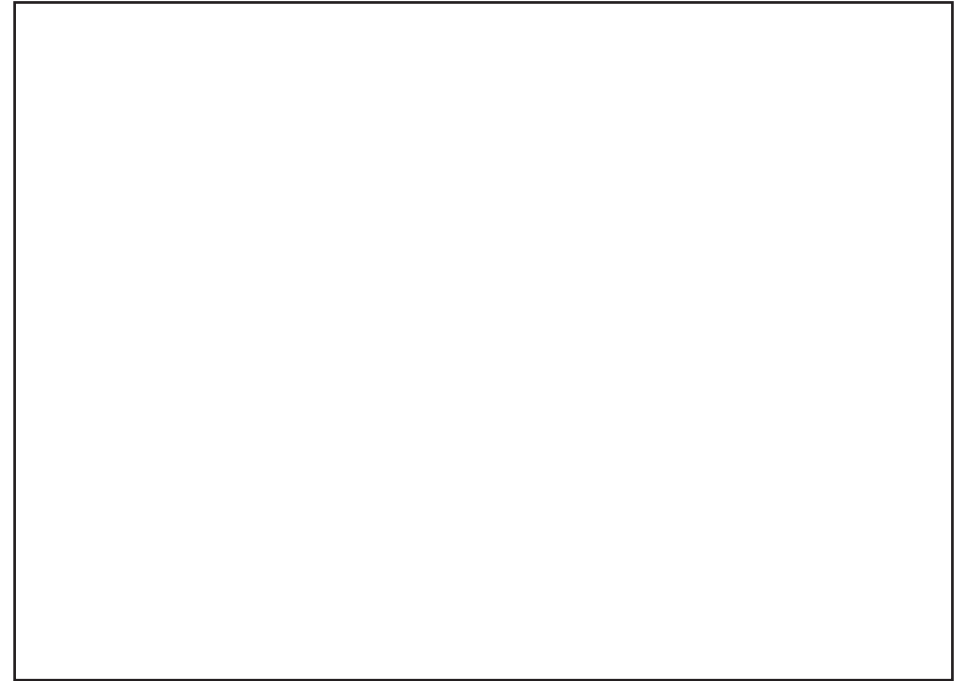

2

Each dolphin has its own high-pitched whistle. Dolphins can tell which dolphin is which, just by the distinct whistle it makes.

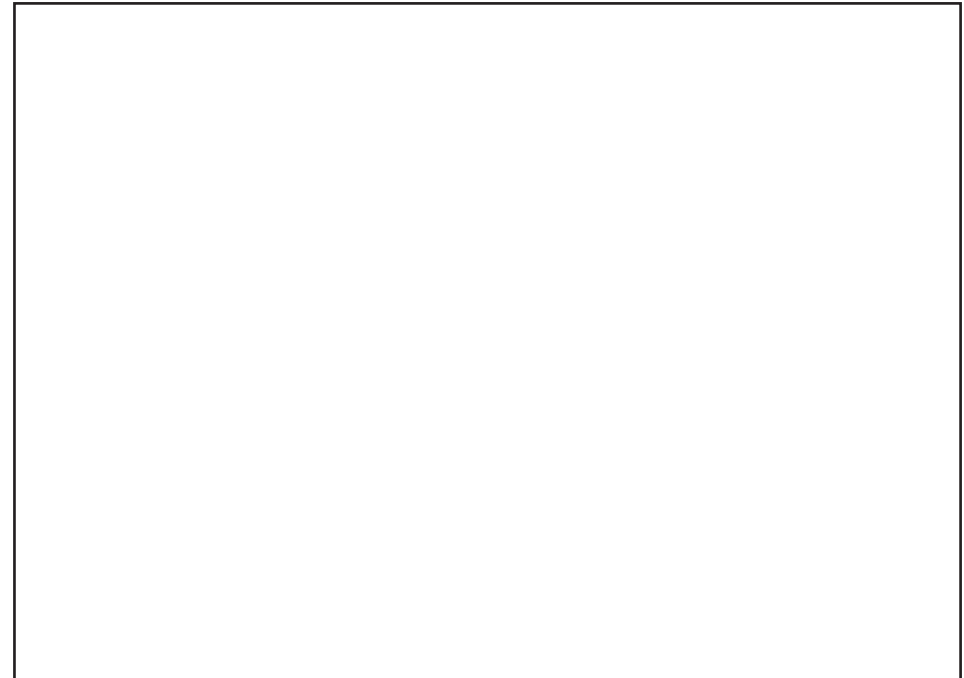

6

A river dolphin may use its pointed snout to dig and find food in the riverbed. Some rivers are shallow, so a dolphin will bend, flex, and angle its nimble body to slip between tree roots and low branches.

14

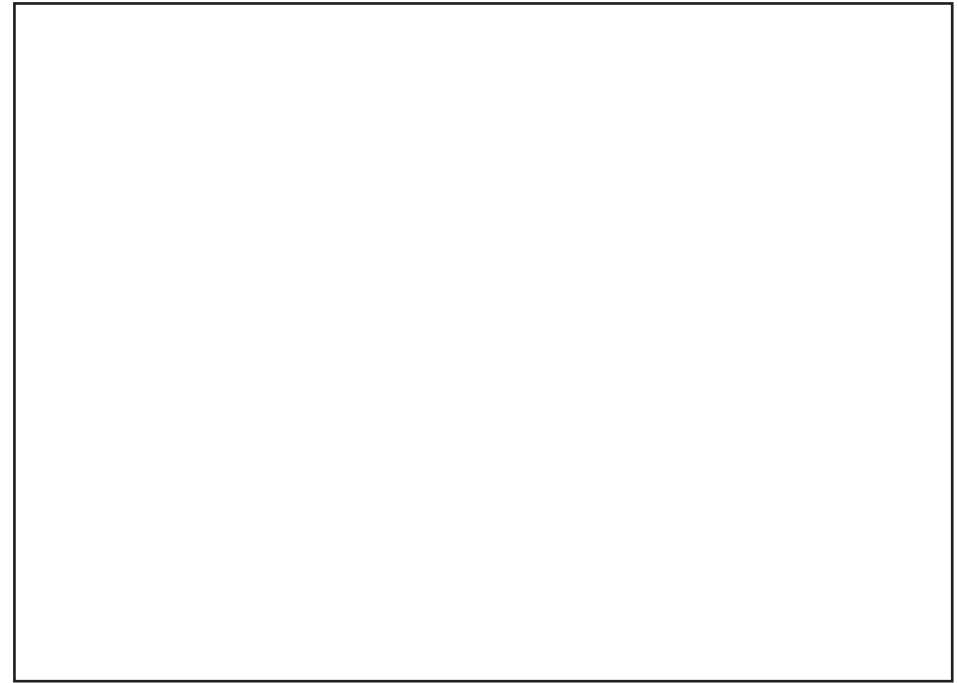

Play time is the best if you are a dolphin. Dolphins love to leap, tumble, and blow bubbles, just for fun. You might even find them enjoying a good game of tag!

10

A dolphin is able to use sound to find its way. It will make a clicking sound, and then track how long it takes for the sound to bounce back. This helps the dolphin “look at” the things around it.

4

Some dolphins are even able to use simple items as tools! This photo shows a dolphin holding a shell. It traps little fish in the shell, then scoops them up to eat!
