

# SyllaSense Decodable Readers

SyllaSense Decodable Books are engaging, meaning-rich stories created to help emergent readers recognize the patterns inherent in the English language. These books are unmatched for educators searching for a more systematic approach to teaching the building blocks of reading while still keeping meaningful text and natural language structures at the forefront. In addition, irregular sight words, digraphs, and some common endings are systematically introduced and tracked at the back of each book.

## Green Series

The Green Series introduces the Closed Syllable concept (a single vowel followed by one or more consonants will make its short sound). The series consists of 20 titles - 10 Fiction Stories and 10 Photo Stories. The Fiction Stories are painted with vivid colours and the stories revolve around animals and young characters. The Photo Stories are created from real photographs. The stories have more of a narrative structure, telling about what the characters are doing and what they are experiencing.

## Purple Series

The Purple Series introduces the Vowel-Consonant-e syllable concept (the vowel will make its long sound, and the "e" is silent). The series consists of 10 Photo Stories, which include a combination of narrative structure and non-fiction text.
